*Olea malacea* ~~With the last 2 words written in red ink.~~  
a woman in her tenth pregnancy, & at  
atmosphere with regular p- month intervals  
in the 4<sup>th</sup> month of her tenth preg-  
the os. Mal appeared.

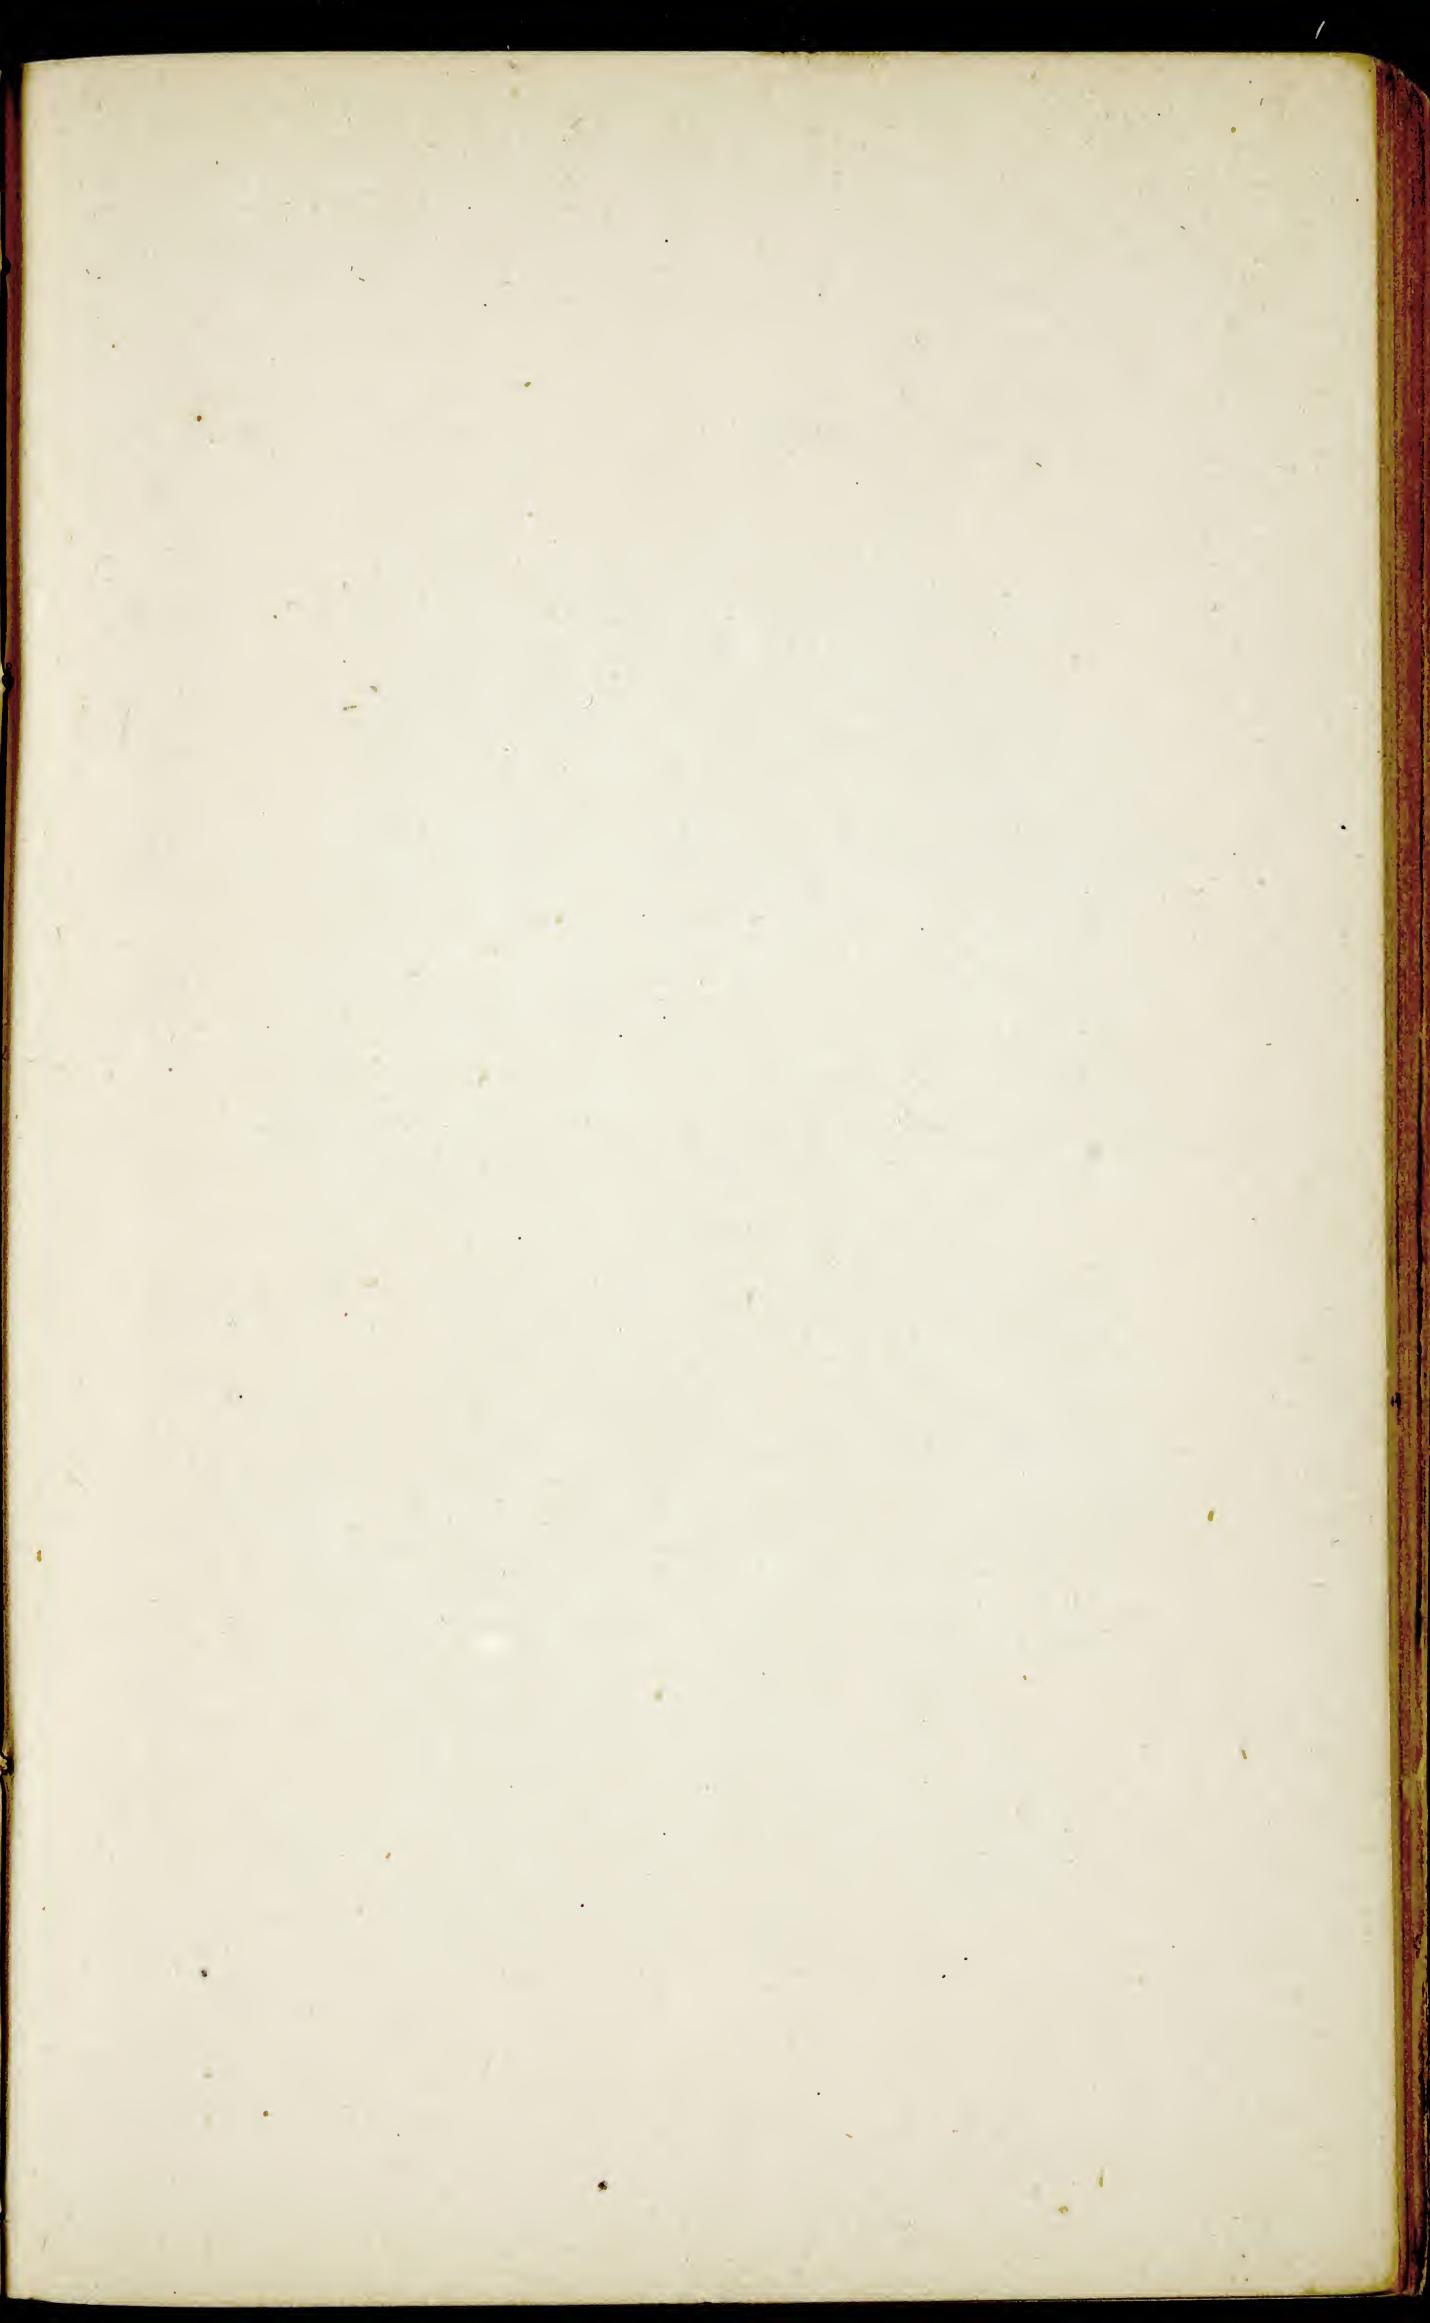

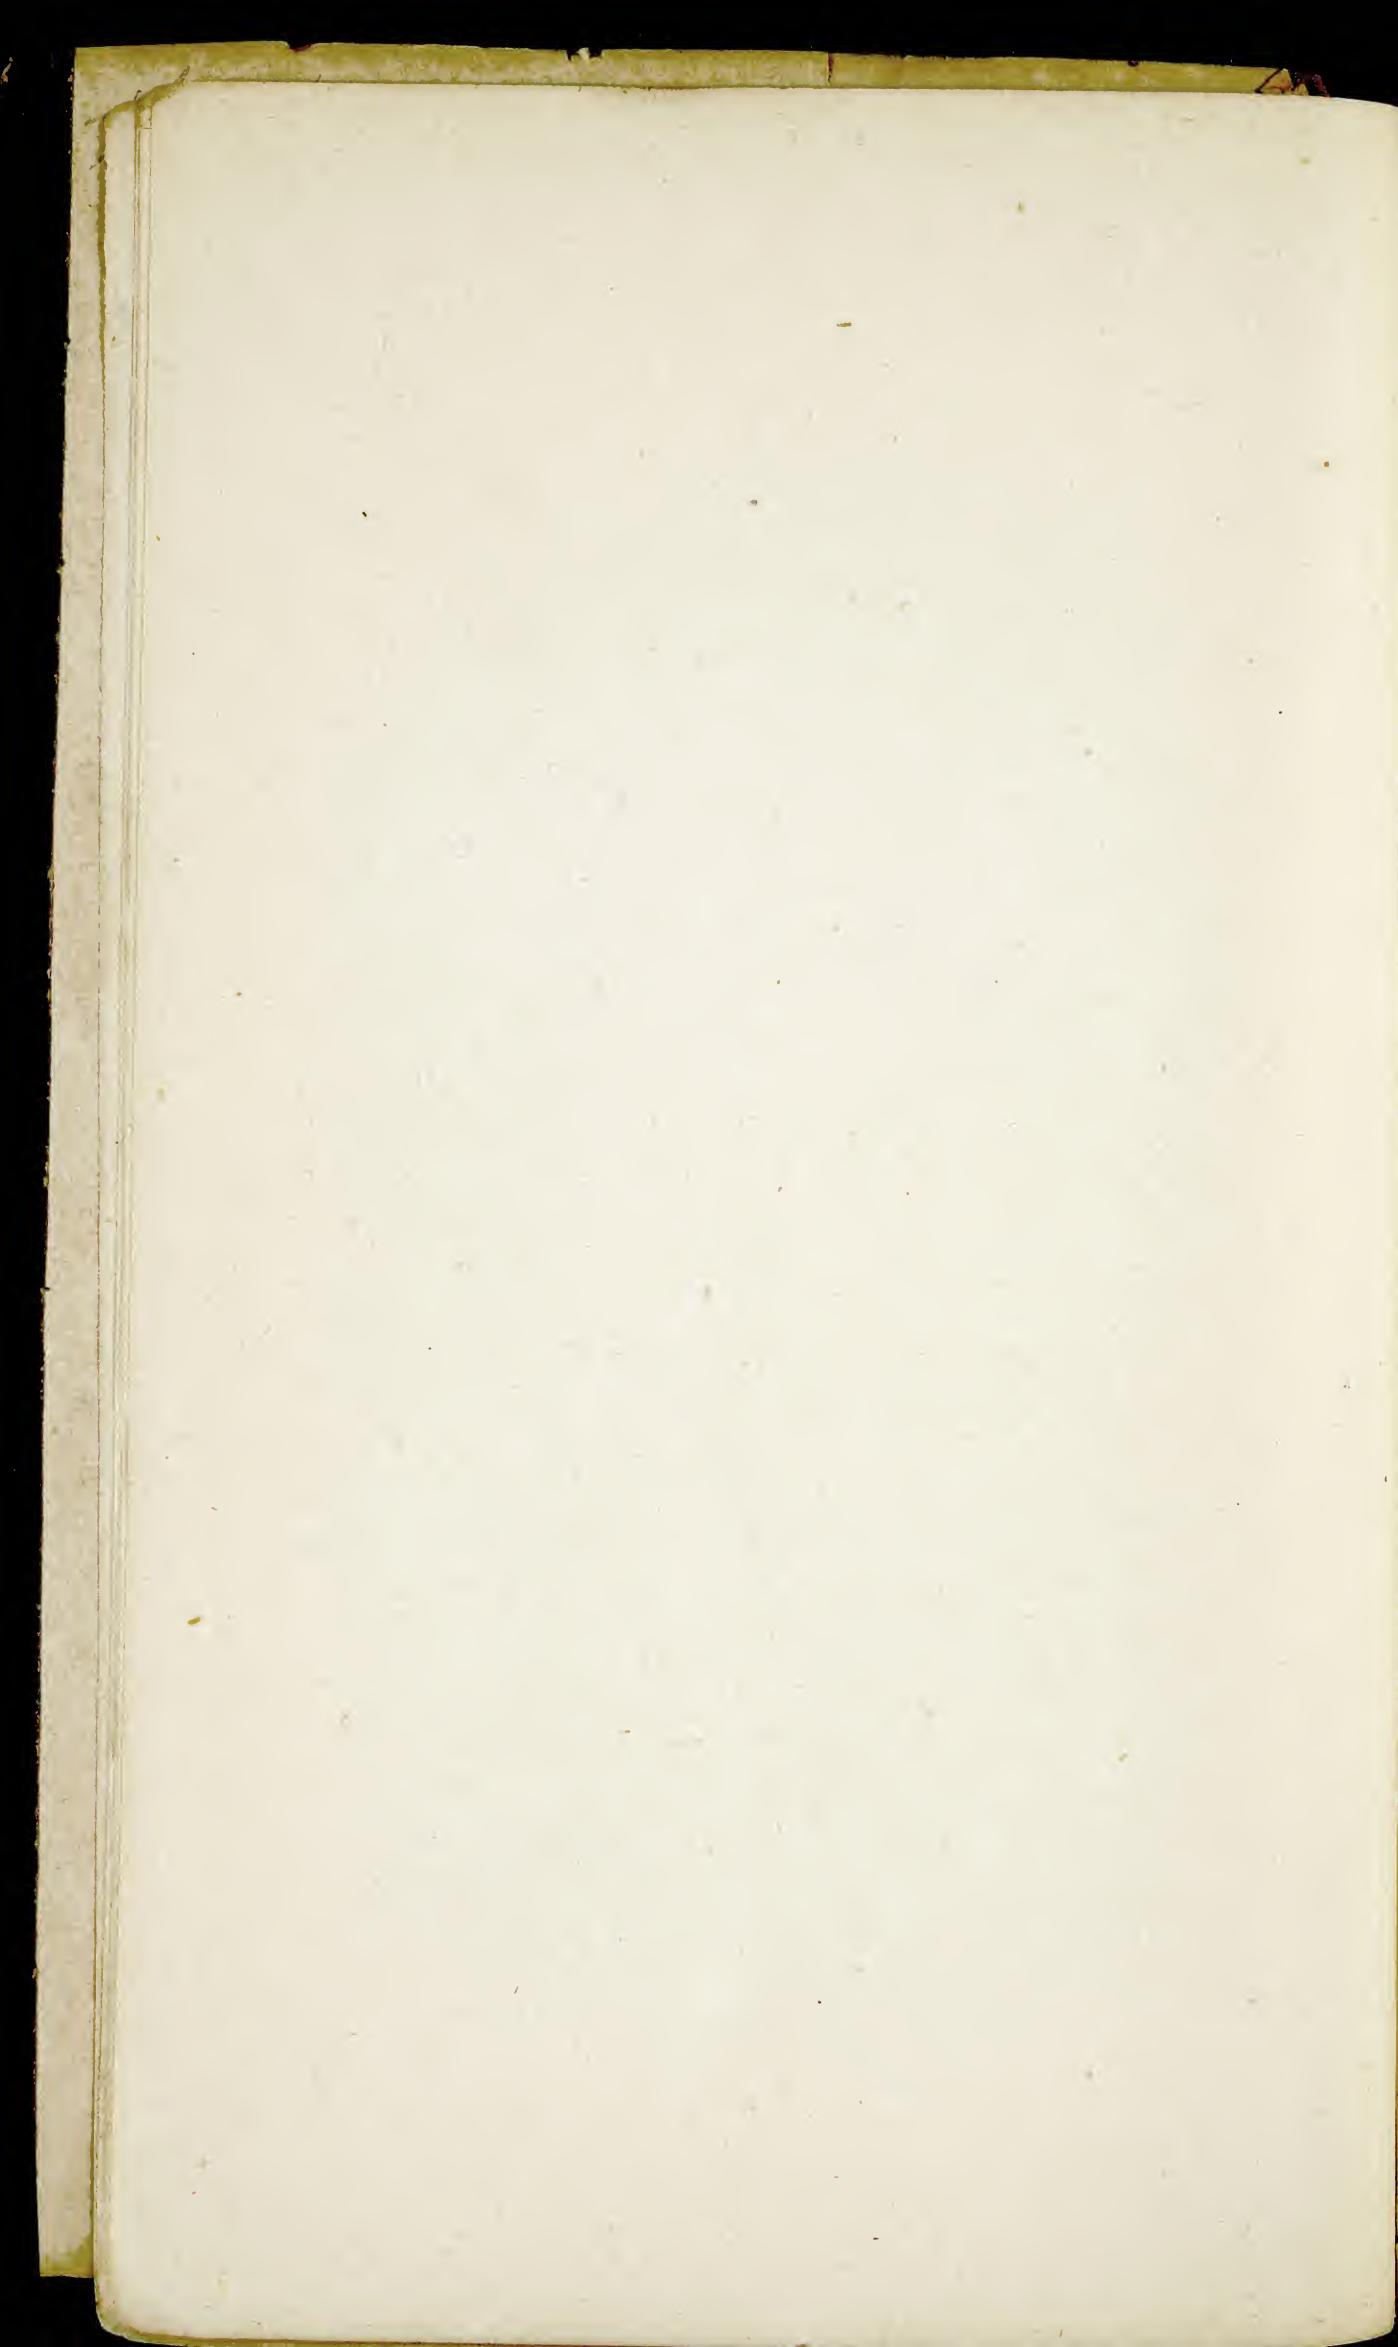

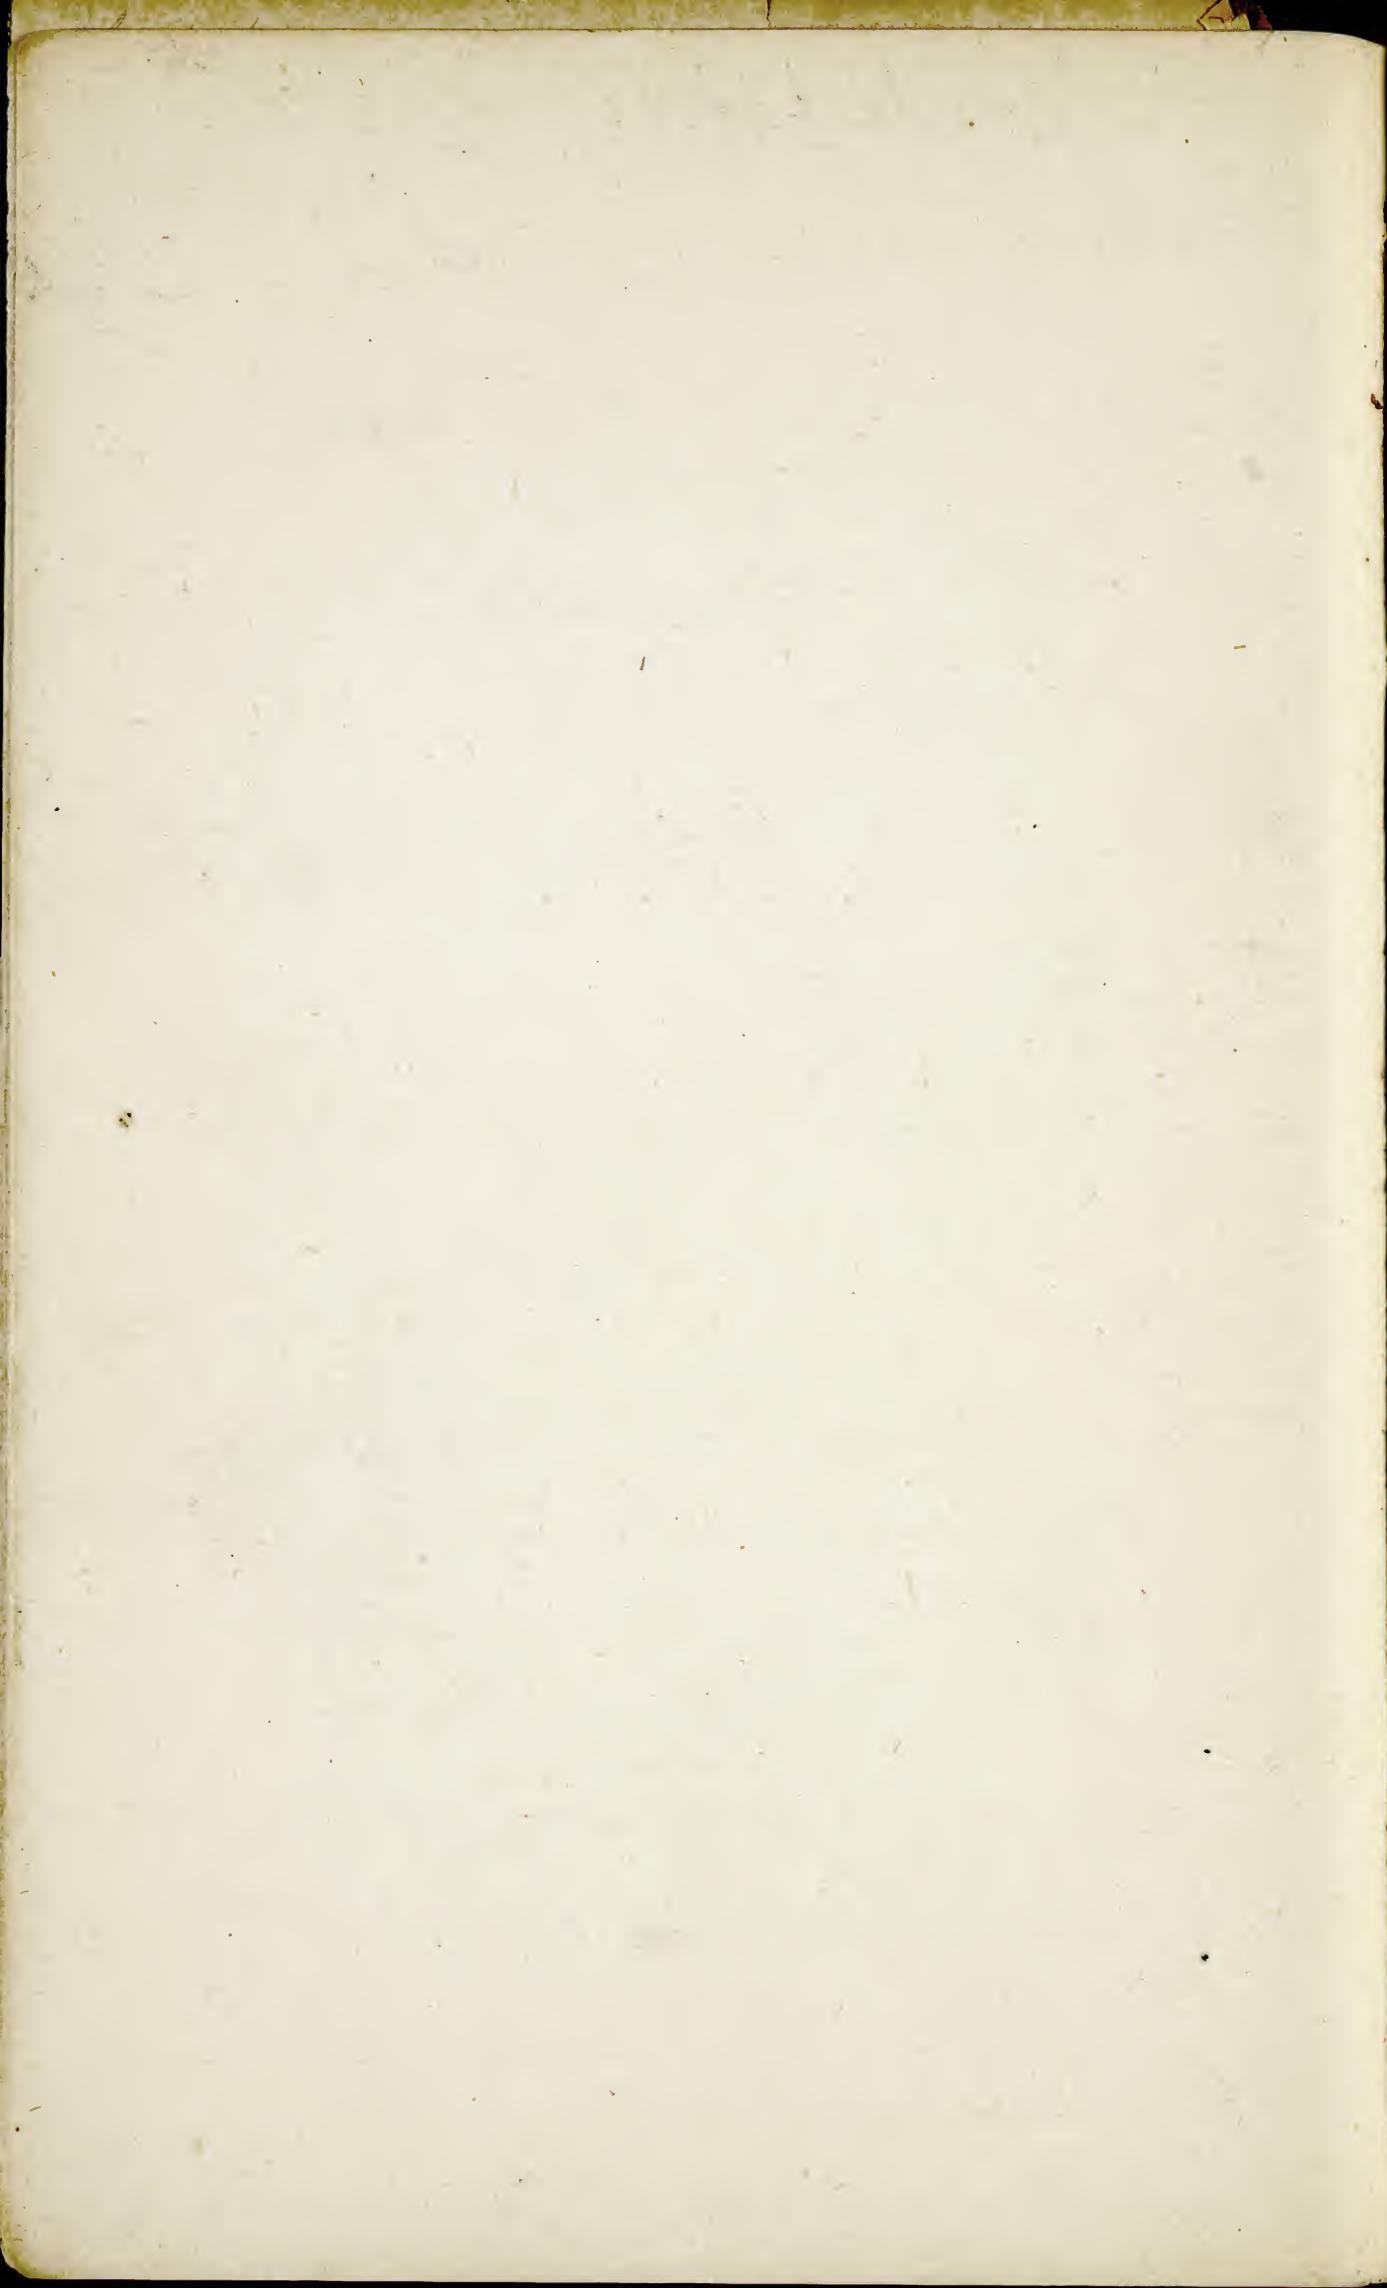

# Wiederhoffer Jan 7<sup>th</sup>

I New born, till ranelting is healed.

II Till appear of first teeth.

III. <sup>week</sup> 20. - 28 month. till perfor  
of 1<sup>st</sup> dentition.

IV 2-3<sup>y</sup> to 7<sup>y</sup> year when second  
dentition

V till pubel,

character of

Breast child small body. Uvula  
48-50 c. normal length

of body. Muscles are all developed  
about 4<sup>th</sup> week. The adenations are about  
the finger joint size. Small testicles  
and very red right and left. No heat movement  
Movement. Head and tail about 1/3 R. long.  
Pale pink lungs. Throat pink. Heart & liver  
well regulated in the due manner after  
first dentition.

When cannot suck. Give it milk through  
A bone. In other way. It seems to drink  
to & give the breast & squatting it a very

good way the more with a spoon. In this way  
Bed a basket is good as away or with the  
mother better still. Move them often and  
from movements regularly  
Slight callart. danger to done sit. When  
even die with their attack one a

Somebody also attend to all  
the life functions

These ch. often come after an illness  
to the mouth ch. Pregnancy, a ch.  
young mothers

When ch. come

the mother <sup>obs</sup> why  
she meets man with bad, or within  
of another not healthy don't let her  
move, get a wet nurse.

Sand bath & put the kid so in bubble bath  
when a healthy <sup>water</sup> walk at first in warm  
& get the case <sup>must move the mother</sup> 2 get away the  
<sup>ch.</sup>

soon if they <sup>ch.</sup> comes soon of walk  
not for 24-36 shall give a help?  
relaxing <sup>small</sup> helps I am  
main <sup>a</sup> sugar if it does not come  
with that. 3<sup>1</sup> in 2-3 oz. & look  
a litt. A mother should always  
have our kind her mother

not an old person young but flag feel  
more suitable for the young  
to help of a bath with <sup>but</sup> cloth of  
kind, says Dr. are not always  
the best they are <sup>but</sup> small - fit  
me. Small are better  
then the saddle during the pregnancy now

with Boarding or laundry station  
I have perhaps a good deal of trouble  
after birth of ch. of the mother.  
~~syphilitic~~ When I went up my external  
anatomy & gravity  
are studied. Then an cases where  
the milk is so poor that it does  
not wash the ch. in there  
are a few more.

Health the first question has with  
but more, best between 20 - 30, <sup>over this not</sup>  
~~that good not under good~~  
there has to be a child at least  
born, enough to live, & fall great  
pressure vein debilit., & feel the pulse of  
the heart, when poor it must with  
strength <sup>from many causes</sup> & heat as much as  
possible, who did not say, may not be outside  
to times, birth, & death, now  
not great debility, but the may, this day, or next  
as day or next, either by hand, This  
makes no difference to the stony ch.  
but a weak one must a care I have  
ment., a very dark bark for a weak child  
whilst I drill at me a body heat, so the  
sophomore must be good & well  
and so mother is not interfere with  
me weak it's a common sign that sub  
acute in breast, Should not be over 2 months  
of a new born child  
Let the next time be a child which who  
has been accustomed to the warmth  
may be diminished.

The age of the arm as a man is important  
a new born child a month arm less for  
suspension or nearly always suspended over the  
other side of bed, age of an adult, arm not longer

~~Catbird stays home little~~  
when the bird in the period gets some  
say no malle when that chick would  
seem unlikely & but not so it. The  
nest a little changed the same is  
brought when in the cut tree gets the  
pied Ch gets color appearance.  
2<sup>nd</sup> period. there app winter longer. you  
see - or 6<sup>th</sup>. the color not change again  
with the arrival of the found but con-  
tinue for 4-5 days. yet pale &  
less strong. when 6-7 miles old  
the 3<sup>rd</sup> period from the off the  
young but for 2-3 months old up.  
stop the 4<sup>th</sup> when the 2<sup>nd</sup> period  
comes. Another Galapagos  
in accuracy of the small found that  
in the boat. When a bird is born and  
the 4<sup>th</sup>. if there a new born me off  
embark. then I do not mix with  
the other does a strong old  
place and get a strong old  
the birds. & Nellie. 3/ A Dog  
saline. glue on the front to a down  
to the nest. I find a

paralysis of the mind of the breast.  
Take care of the ck & don't apply it to the  
breast when the appl. is on.

If a patient also feels no matter of the  
ck. hit of a finger on the cent. not  
chapped nipples when by hand must take  
away the child less, one in every hand  
who feeds the nipple  
when <sup>and</sup> w. n. need little care.

If any illness as fever, an acute  
cough catarrh, must draw off the milk  
Medium must be used careful, as they  
influence the milk as they all do except  
in the milk.

When one sees that the N. is perfectly  
normal & the function to be normal a  
good nutritional.

K. 2 months old. fed with Schmidl. every  
2 hours - round colic. Up the Colon not the  
Stomach did put it

The aid in the q. art. you is now believed to  
be as much importance as the perfusion  
It put it only cause in 3<sup>rd</sup> Pg. One Letter of  
the before drinking.

*Tanquebaricus* common with; Raibat  
Raibat small well cold water way & how,  
on the head especially.  
Sg. Sars, so did some coffee.

Ab now that we by our feeding Chaddam  
especially the turtles much food get pale  
& fat, too fast with 3-4 m. at Raibat  
Oysters appear follow shore to mud banks  
<sup>water</sup> in the day & in the night may  
be 14 do d. when 2 month old, &  
time enough, under 1 month & in the night  
so that in night is six times a day  
5-6 in 24 hrs fr. a cloud 2-3 month  
old, then shall we see  
I think chadda & the mother or my 3. first  
about <sup>morning & night</sup> I refer her best I can feed for lack  
of <sup>was</sup> time. It is <sup>CC the</sup> 3<sup>rd</sup> month  
at Raibat then spilt 10-12 m. &  
then the salmon begin to run out of the  
oyster banks & a large fish left take  
the movement  
& depends on the W. N or North e. when from any  
the north goes then if the wind mounted  
about 7-8 miles off

temperature, Plaster, mud of old  
physic. Cold water treatment is  
good.

Intestines, the follecular form

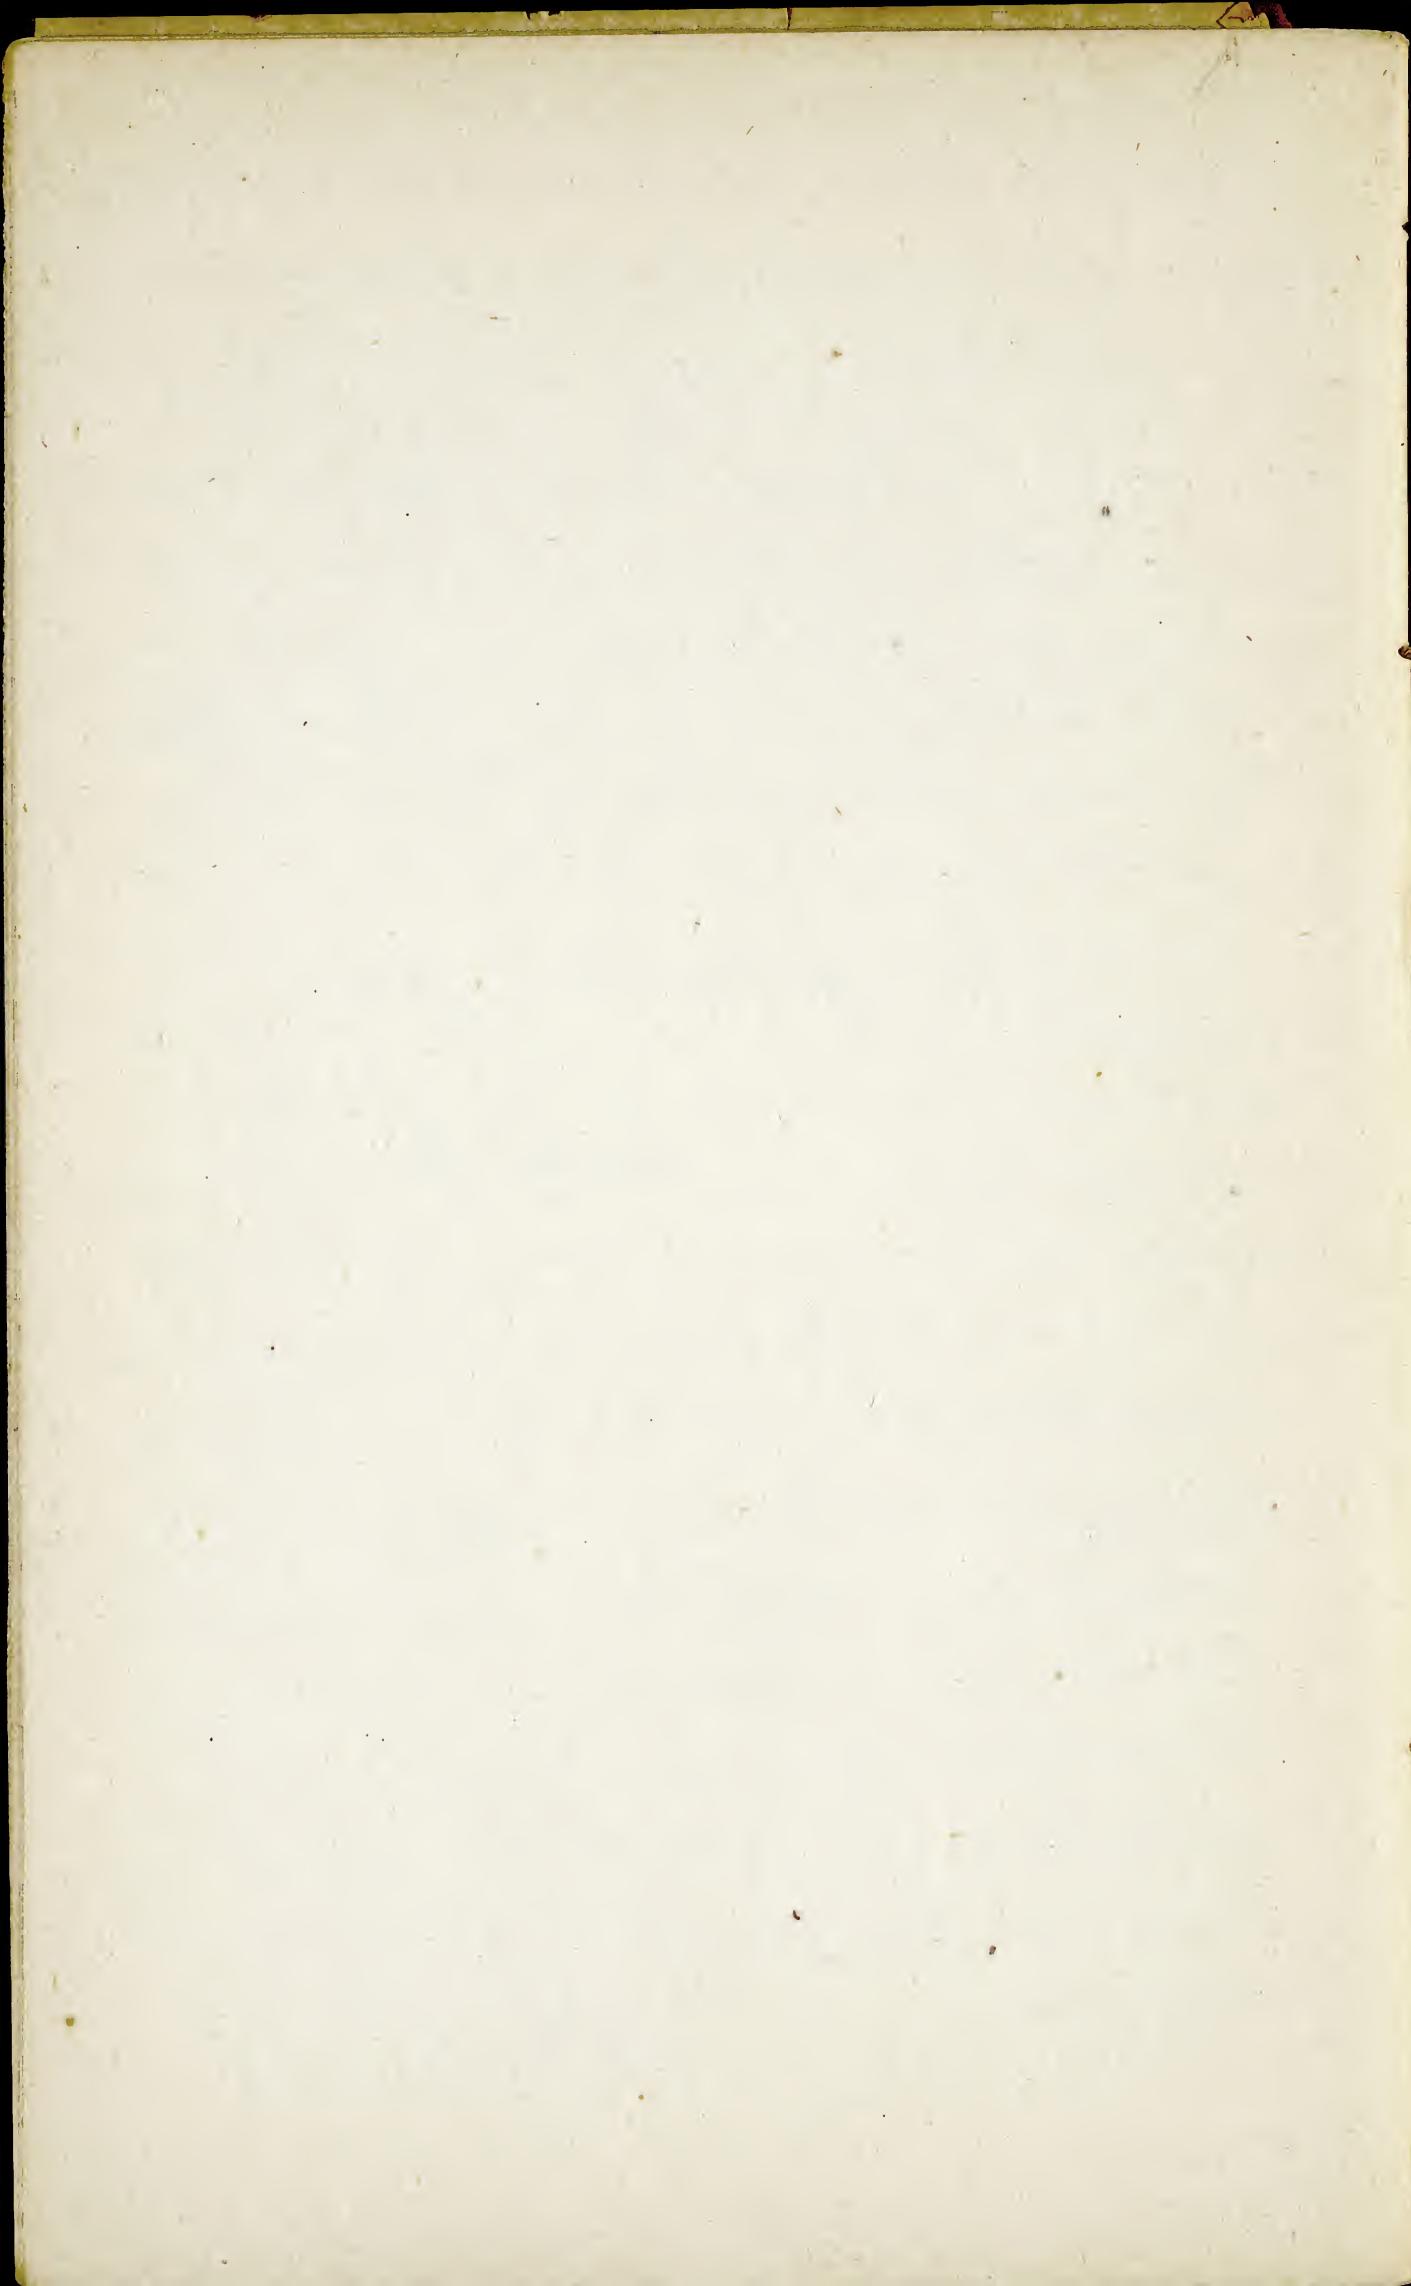

begins in such, or as a dysentery, or  
incorpora come in Schisto-sis, my plan is  
first P. in large piles swollen, mucus

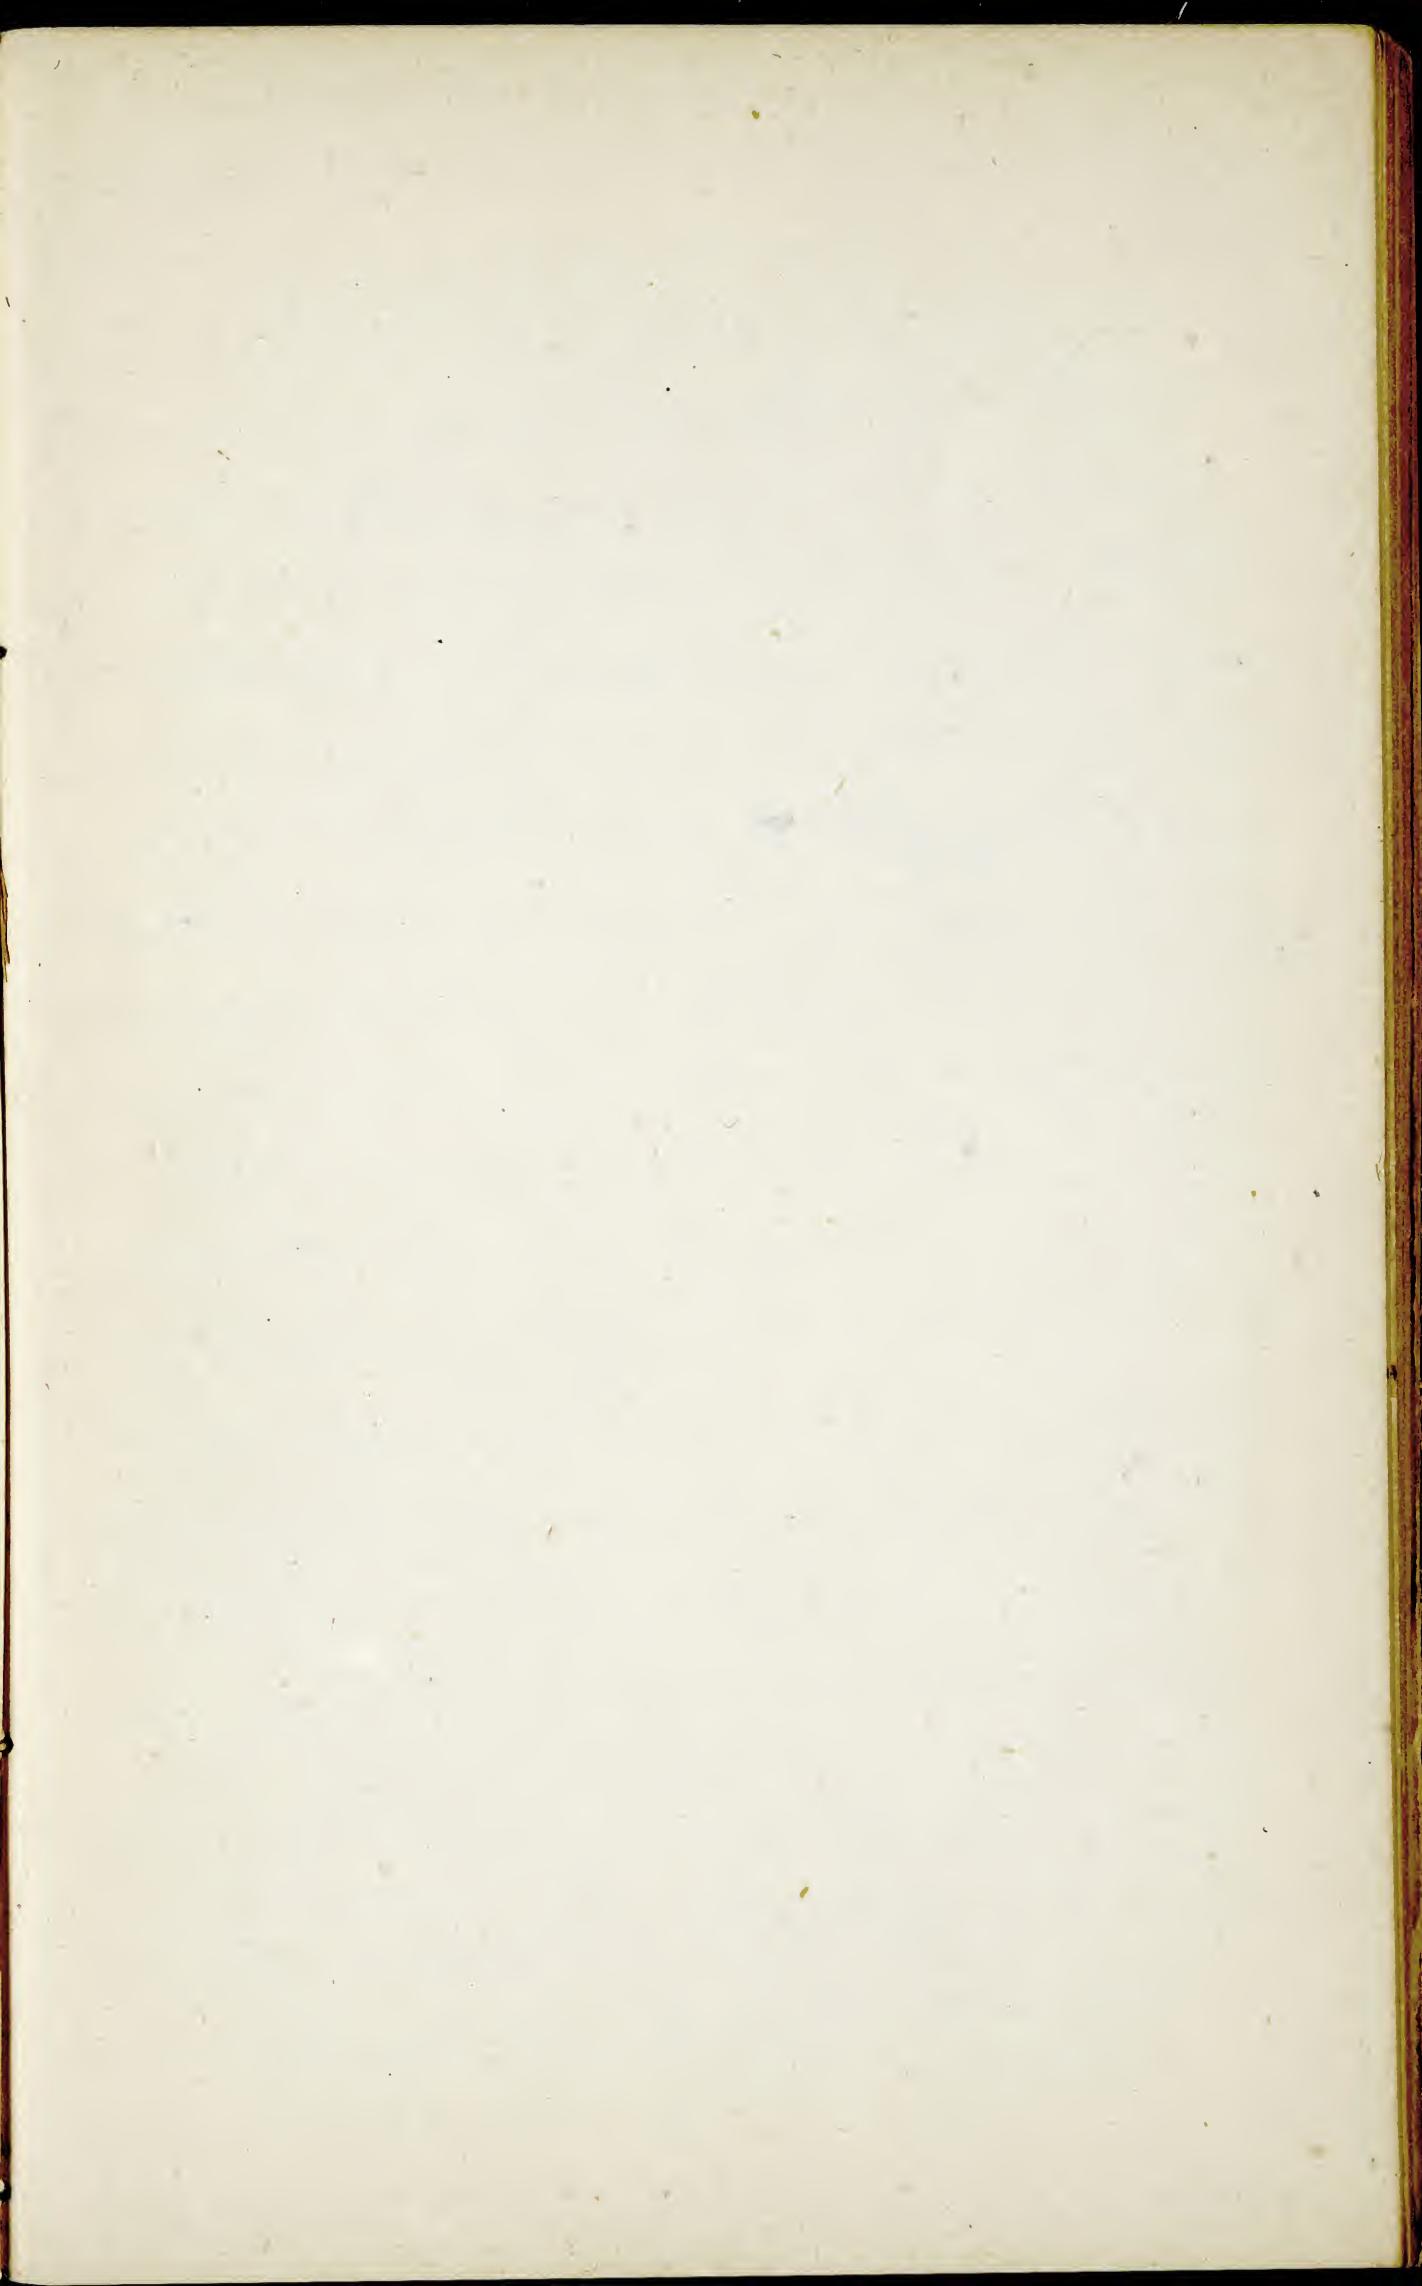

of dark tan, glutinous, as of longish white  
tape, tortoise, back & down it forms  
stools pounds besides, either glass

cold, greenish, or blood purts  
which of course dysentery. Cassia also  
unchanged also, come in which

has been lay in a bath tub, over them  
of fibres, for, is stool. It is frequent  
large mass. It is small stool often

way not turn, a health, looking like  
at another a big stool by enteric foul-  
colled, mixed stool. Pass at stool

out of way, & without flattening a  
pot of pemmican if his belly sick & pain-  
ful often intimated. Rather by weight  
than taste the all the force, - and  
it goes well in a Duffel. Use of long  
water in force, or as a coolant in more  
severe. They are pale, emaciated  
nude. Dry lips, shriveller, & regardless  
of colour, yet pair of iron claws  
less. They get up from their tubes  
emaciated, and as they lie so stupid  
since the abrading of. If a long un-  
wieldy cut the skin allows  
sores that bleed like the ch. & g.  
plant many & them readily com-  
municate, I have seen cases of some ten  
in the savannahs, sing a hymn & die.  
Prof. Lind said when fever is bad a begin-  
ning. And when respiration is attack-  
ed, and the pulse & condition is  
different for a few day to years.

The coffee Diet. with no fleshing except  
alone, or a coffee can do wonders, but  
the better, the milder this fever is forced  
for 2-3 days a cold drink to soda water  
later give black wine & water small quantity  
of bread with often, thin raw flesh, & you

lytes or & the bath a rubbing  
change fair is wonderful. An  
imp factor the appearance w/ the hy droceph  
an older growing, the the temporal  
cervical in the brain. This is very common  
it looks for this when disease comes  
on a den of eyeball or face, I have  
begun stone the brain, now palp-  
able, it is deep shade  
small the dimples, & impalpable  
was pale, & in the men. tubercles  
commin, wide pupils, sinking banch  
area & convulsions. Relieve them &  
very but little & don't let the body  
the debt in act & a chronic form  
Therape. stop the drainage, & action  
wellness open in the gut, & as the  
age, for done, stimulant, must be  
bed, wine cognac Camphor. Other

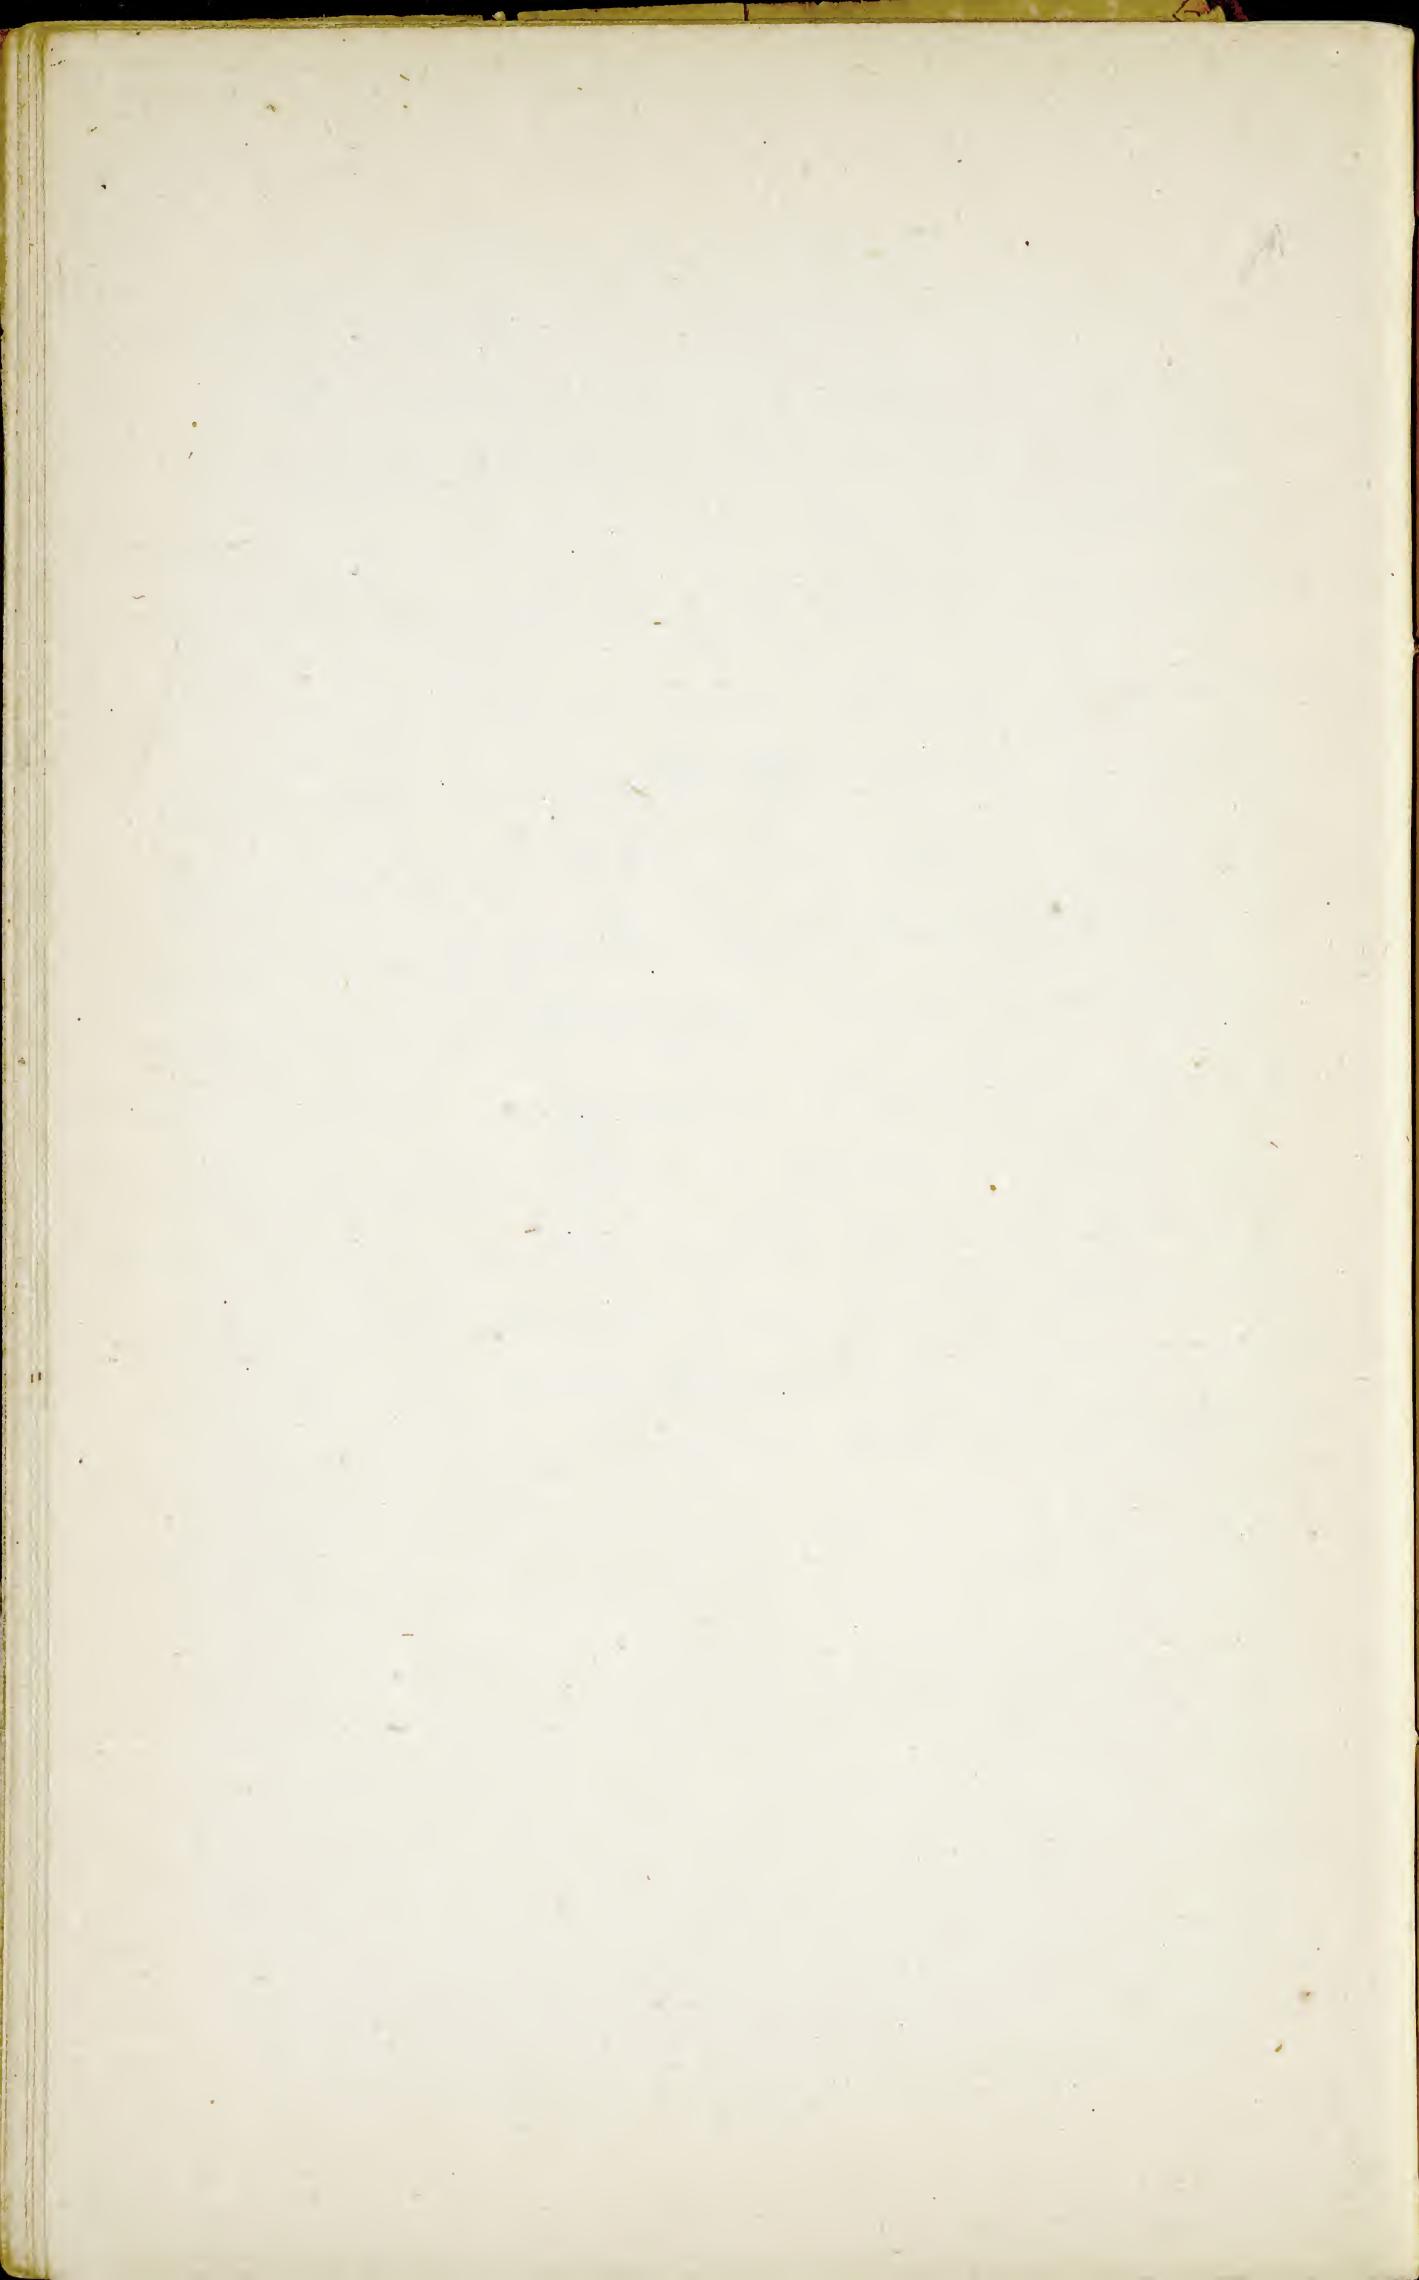

Sulph., Ag. Cean long down & night  
thick soups

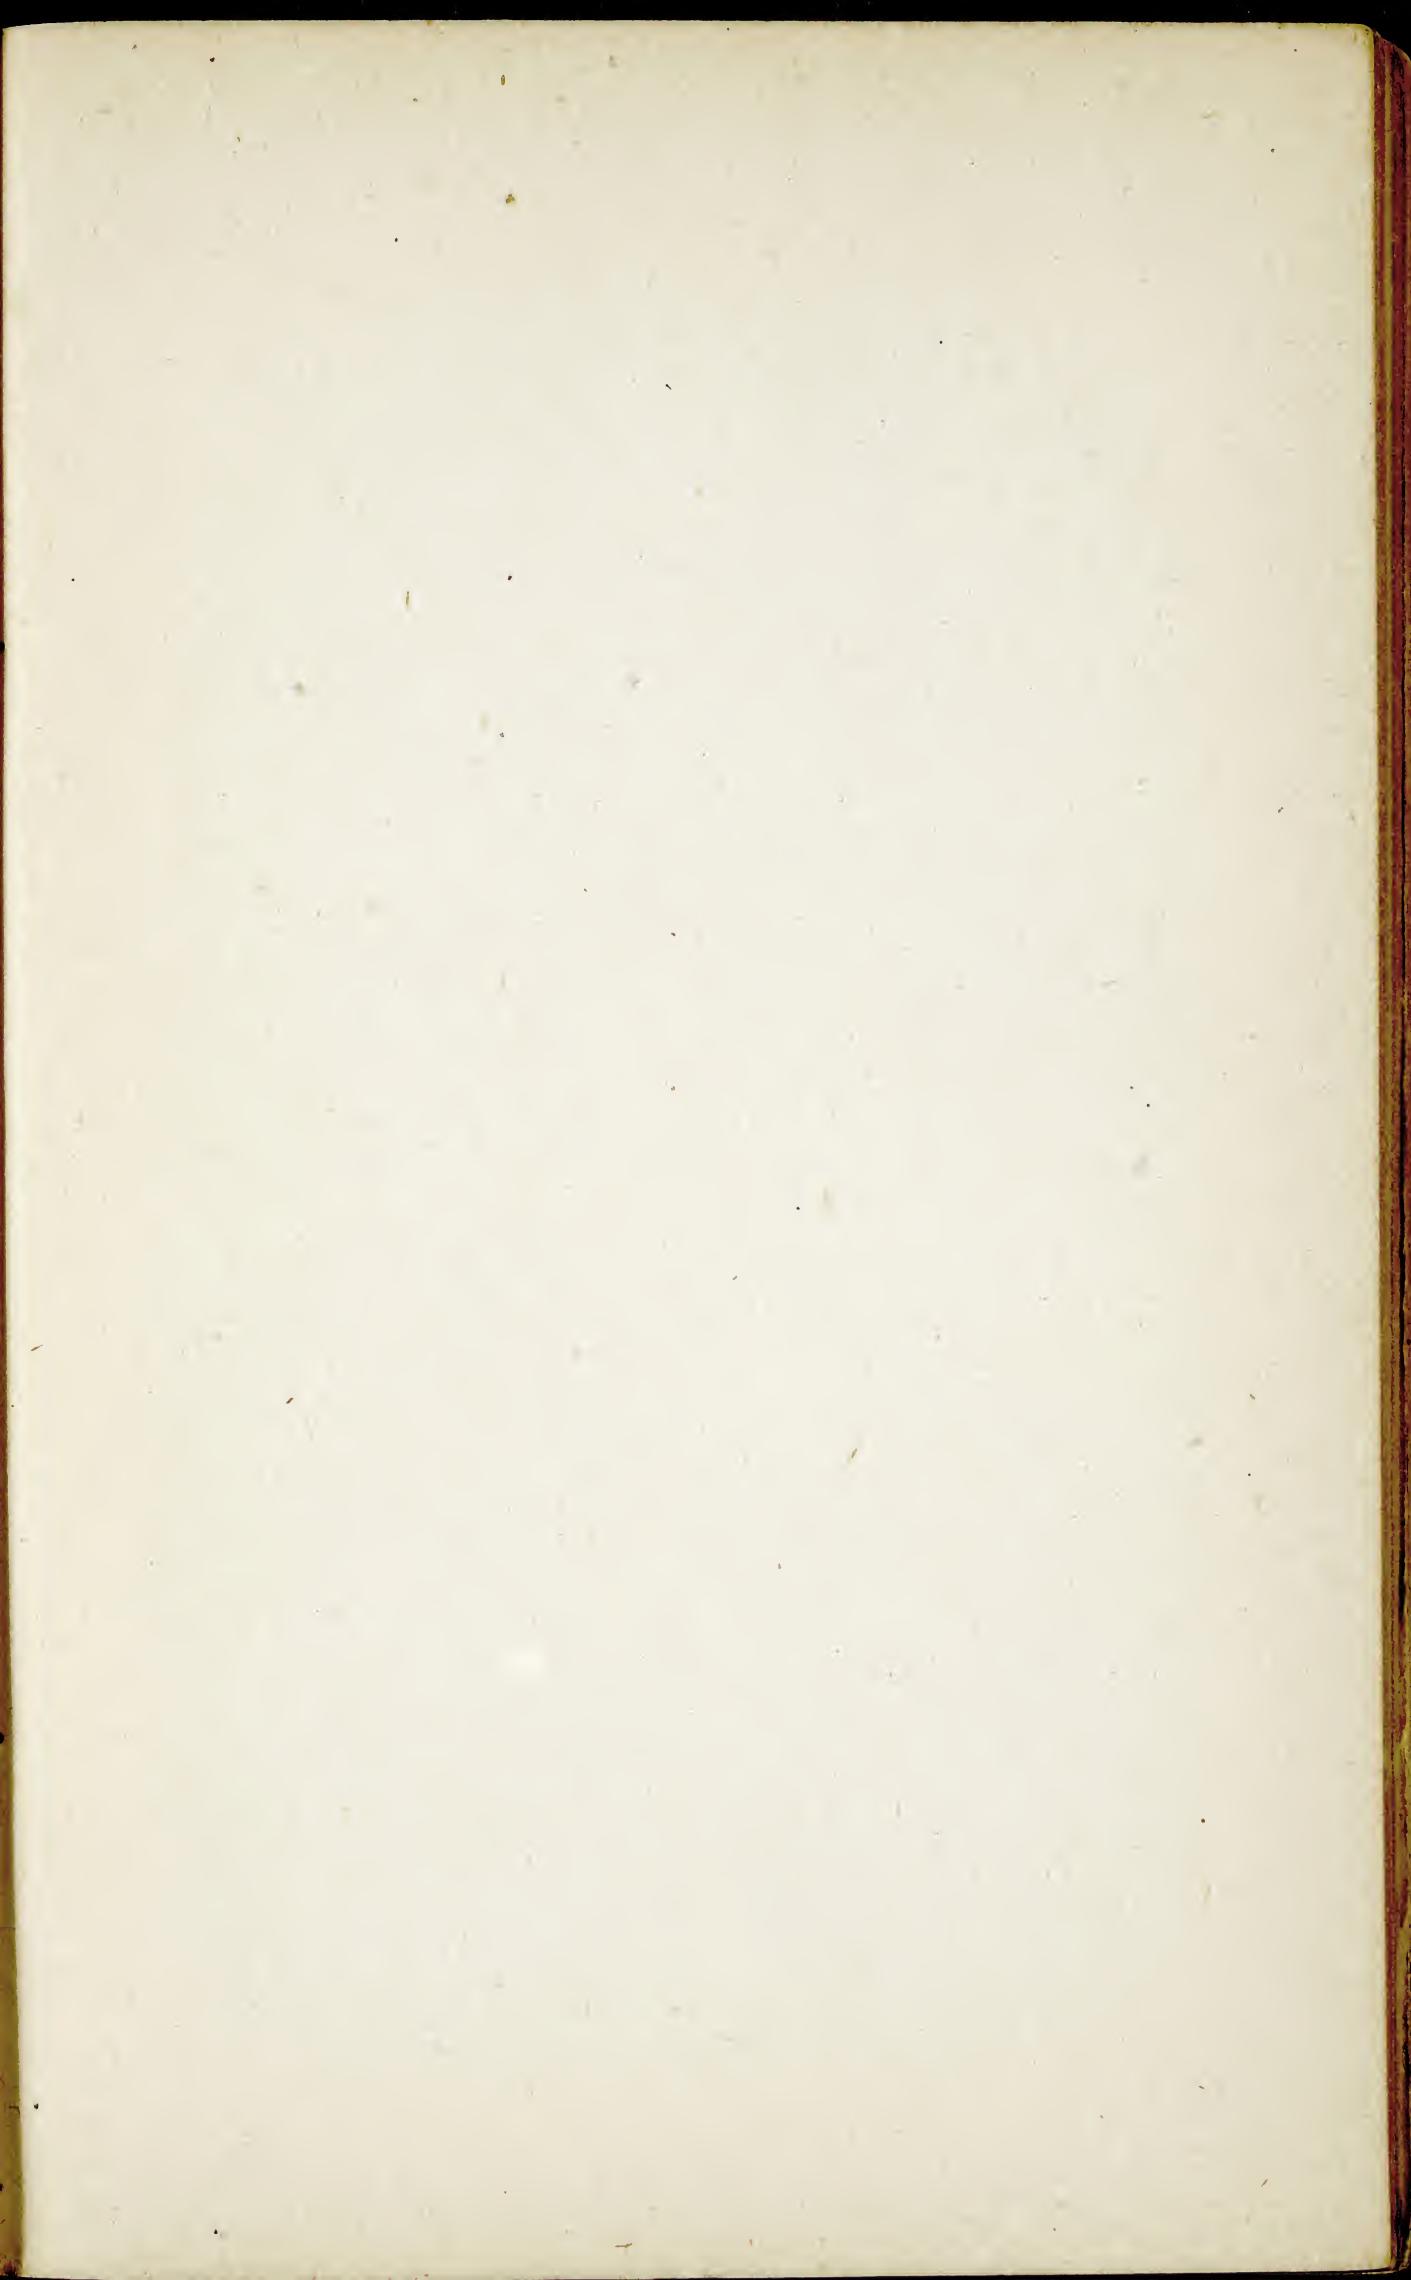

Morbilli are as an ab. chan & red  
fleeks over the whole body now, few  
& calcarous excrements it is contagious.  
It ends material is in the mucus & ad-  
abs from the various membranes. Incubation  
16-18 days. It is good to separate children  
unless it is done at the moment of  
before the calcarous come out.

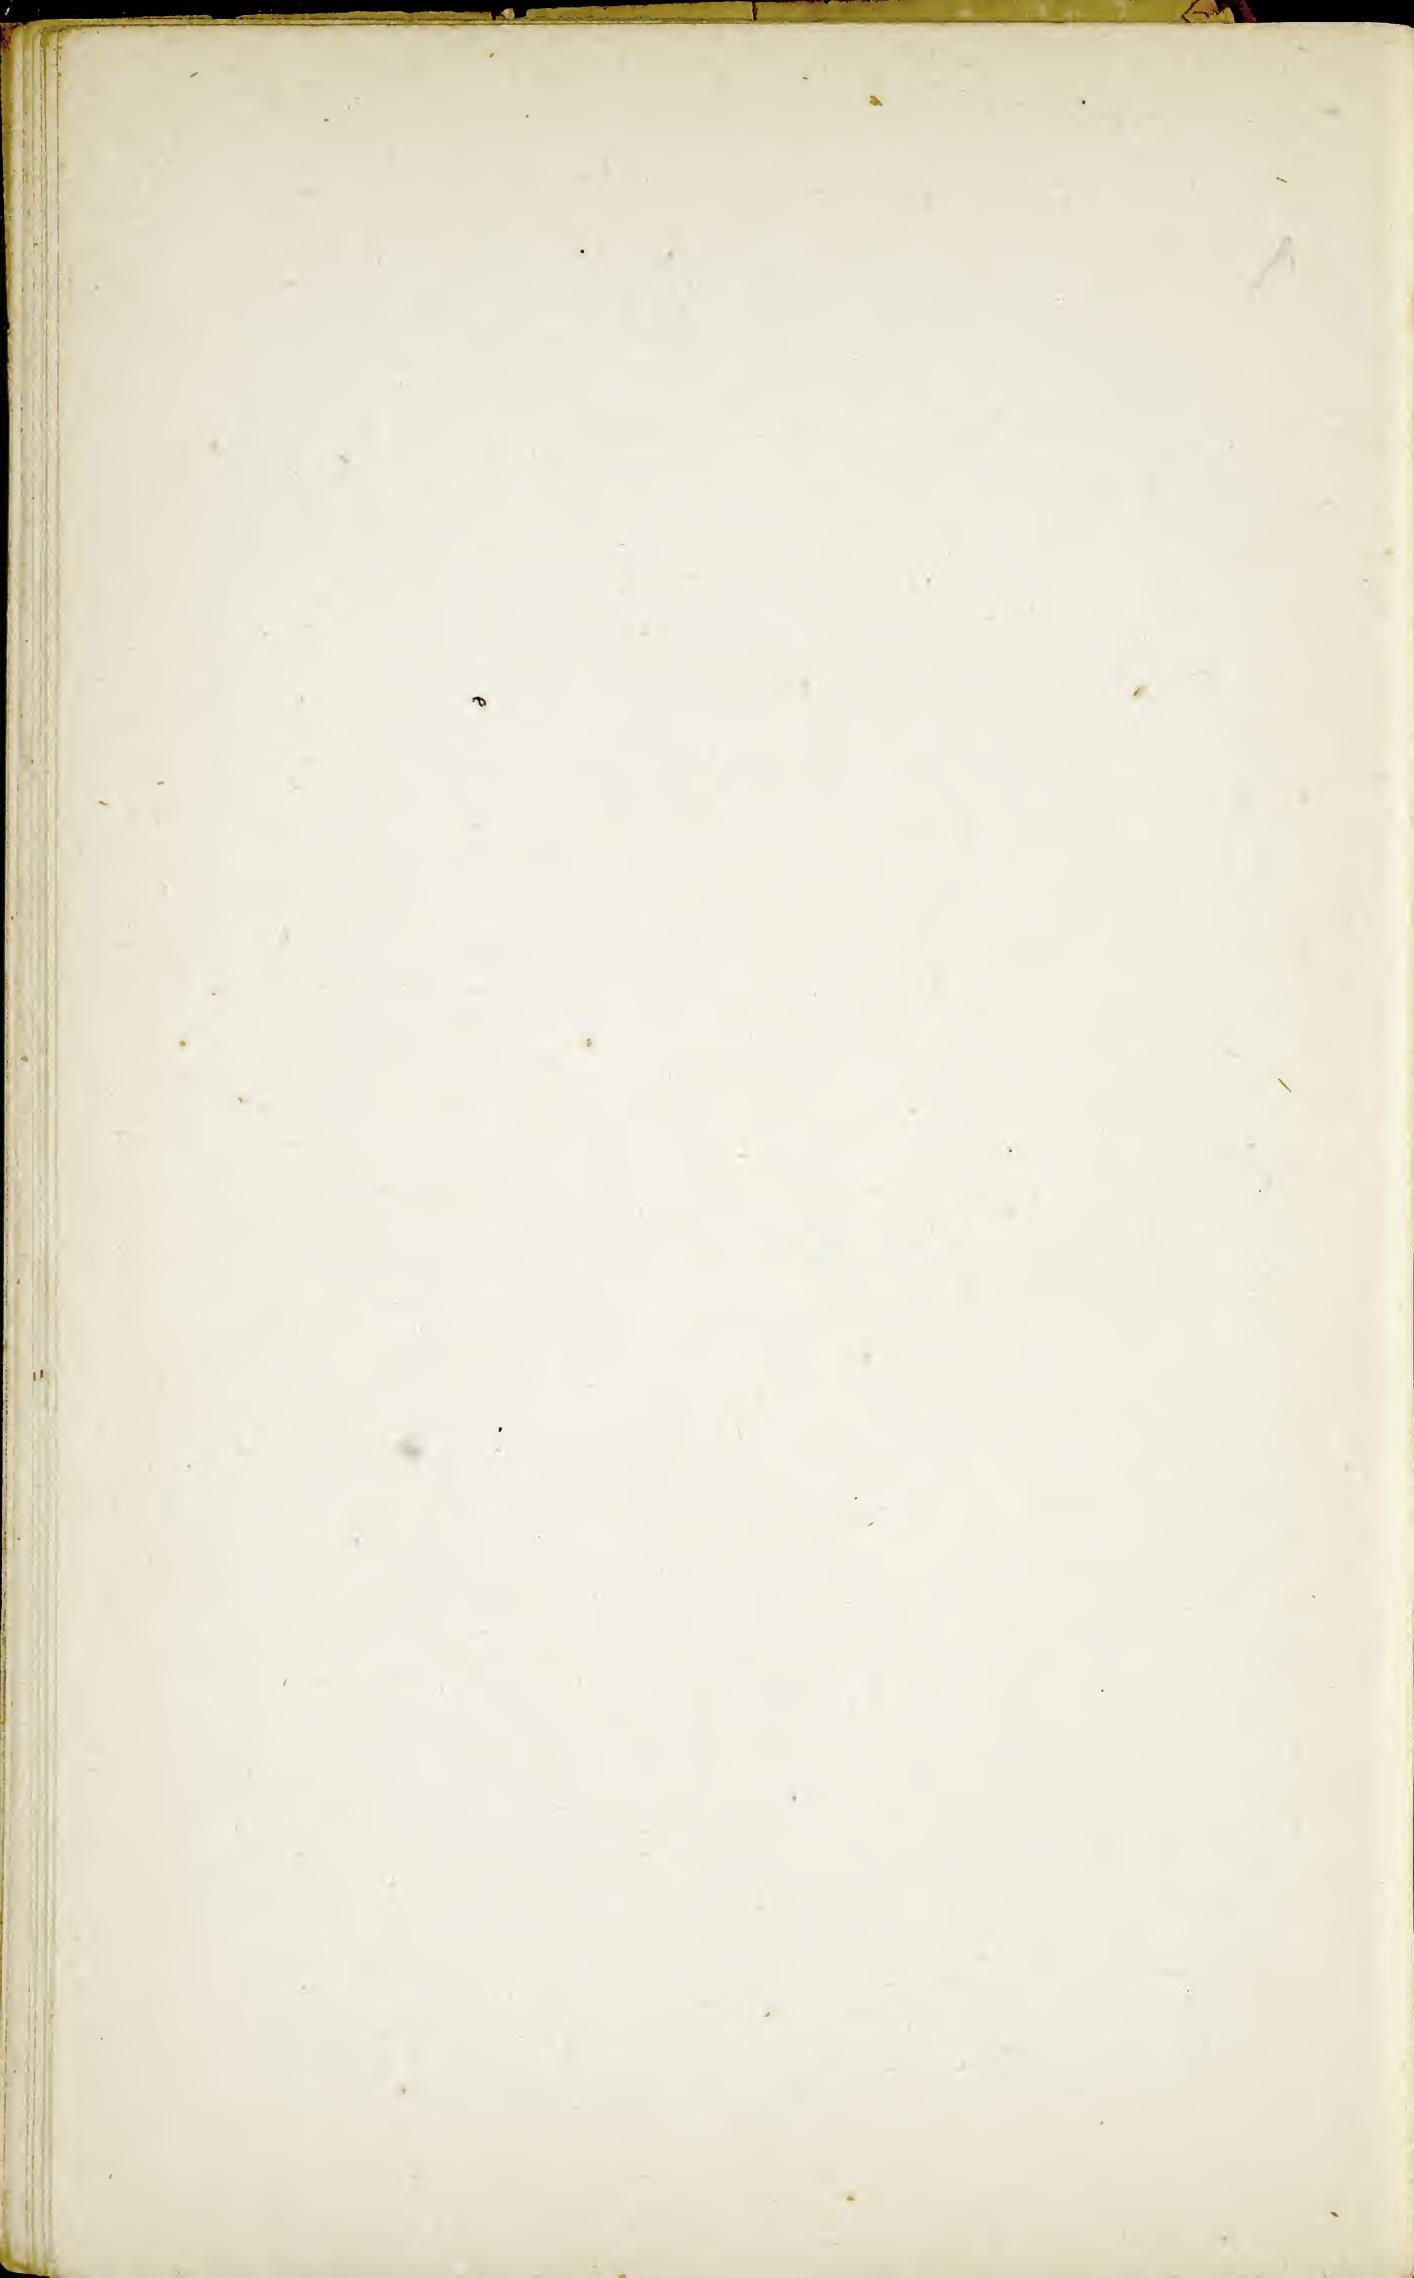

Symptom. Prodromal. colic which appears  
from anger now. Pharynx is swollen  
first 1-4 days perhaps most important  
is the catarrh & the cough a mean cough  
& laryngeal cough. Take currant & mus-  
catle this for cough. May get even a  
slower glaucoma. In this. or an adema  
in Lab. Respir. Fever. mucus. small  
red spots on forehead & face. then to  
neck & breast in 3 day the whole body covered  
by same as described the eruptive faces first.  
The pigment flecks remain often more or less  
marked. abschupping comes in dependency  
on the eruptive & ends about the 12. days  
when the catarrh is long over & complex only  
for the disease last 6 week. with a 14 day  
disease. An important point is that  
and health, spot - man between the first  
al & fourth. This is a point of distinction.

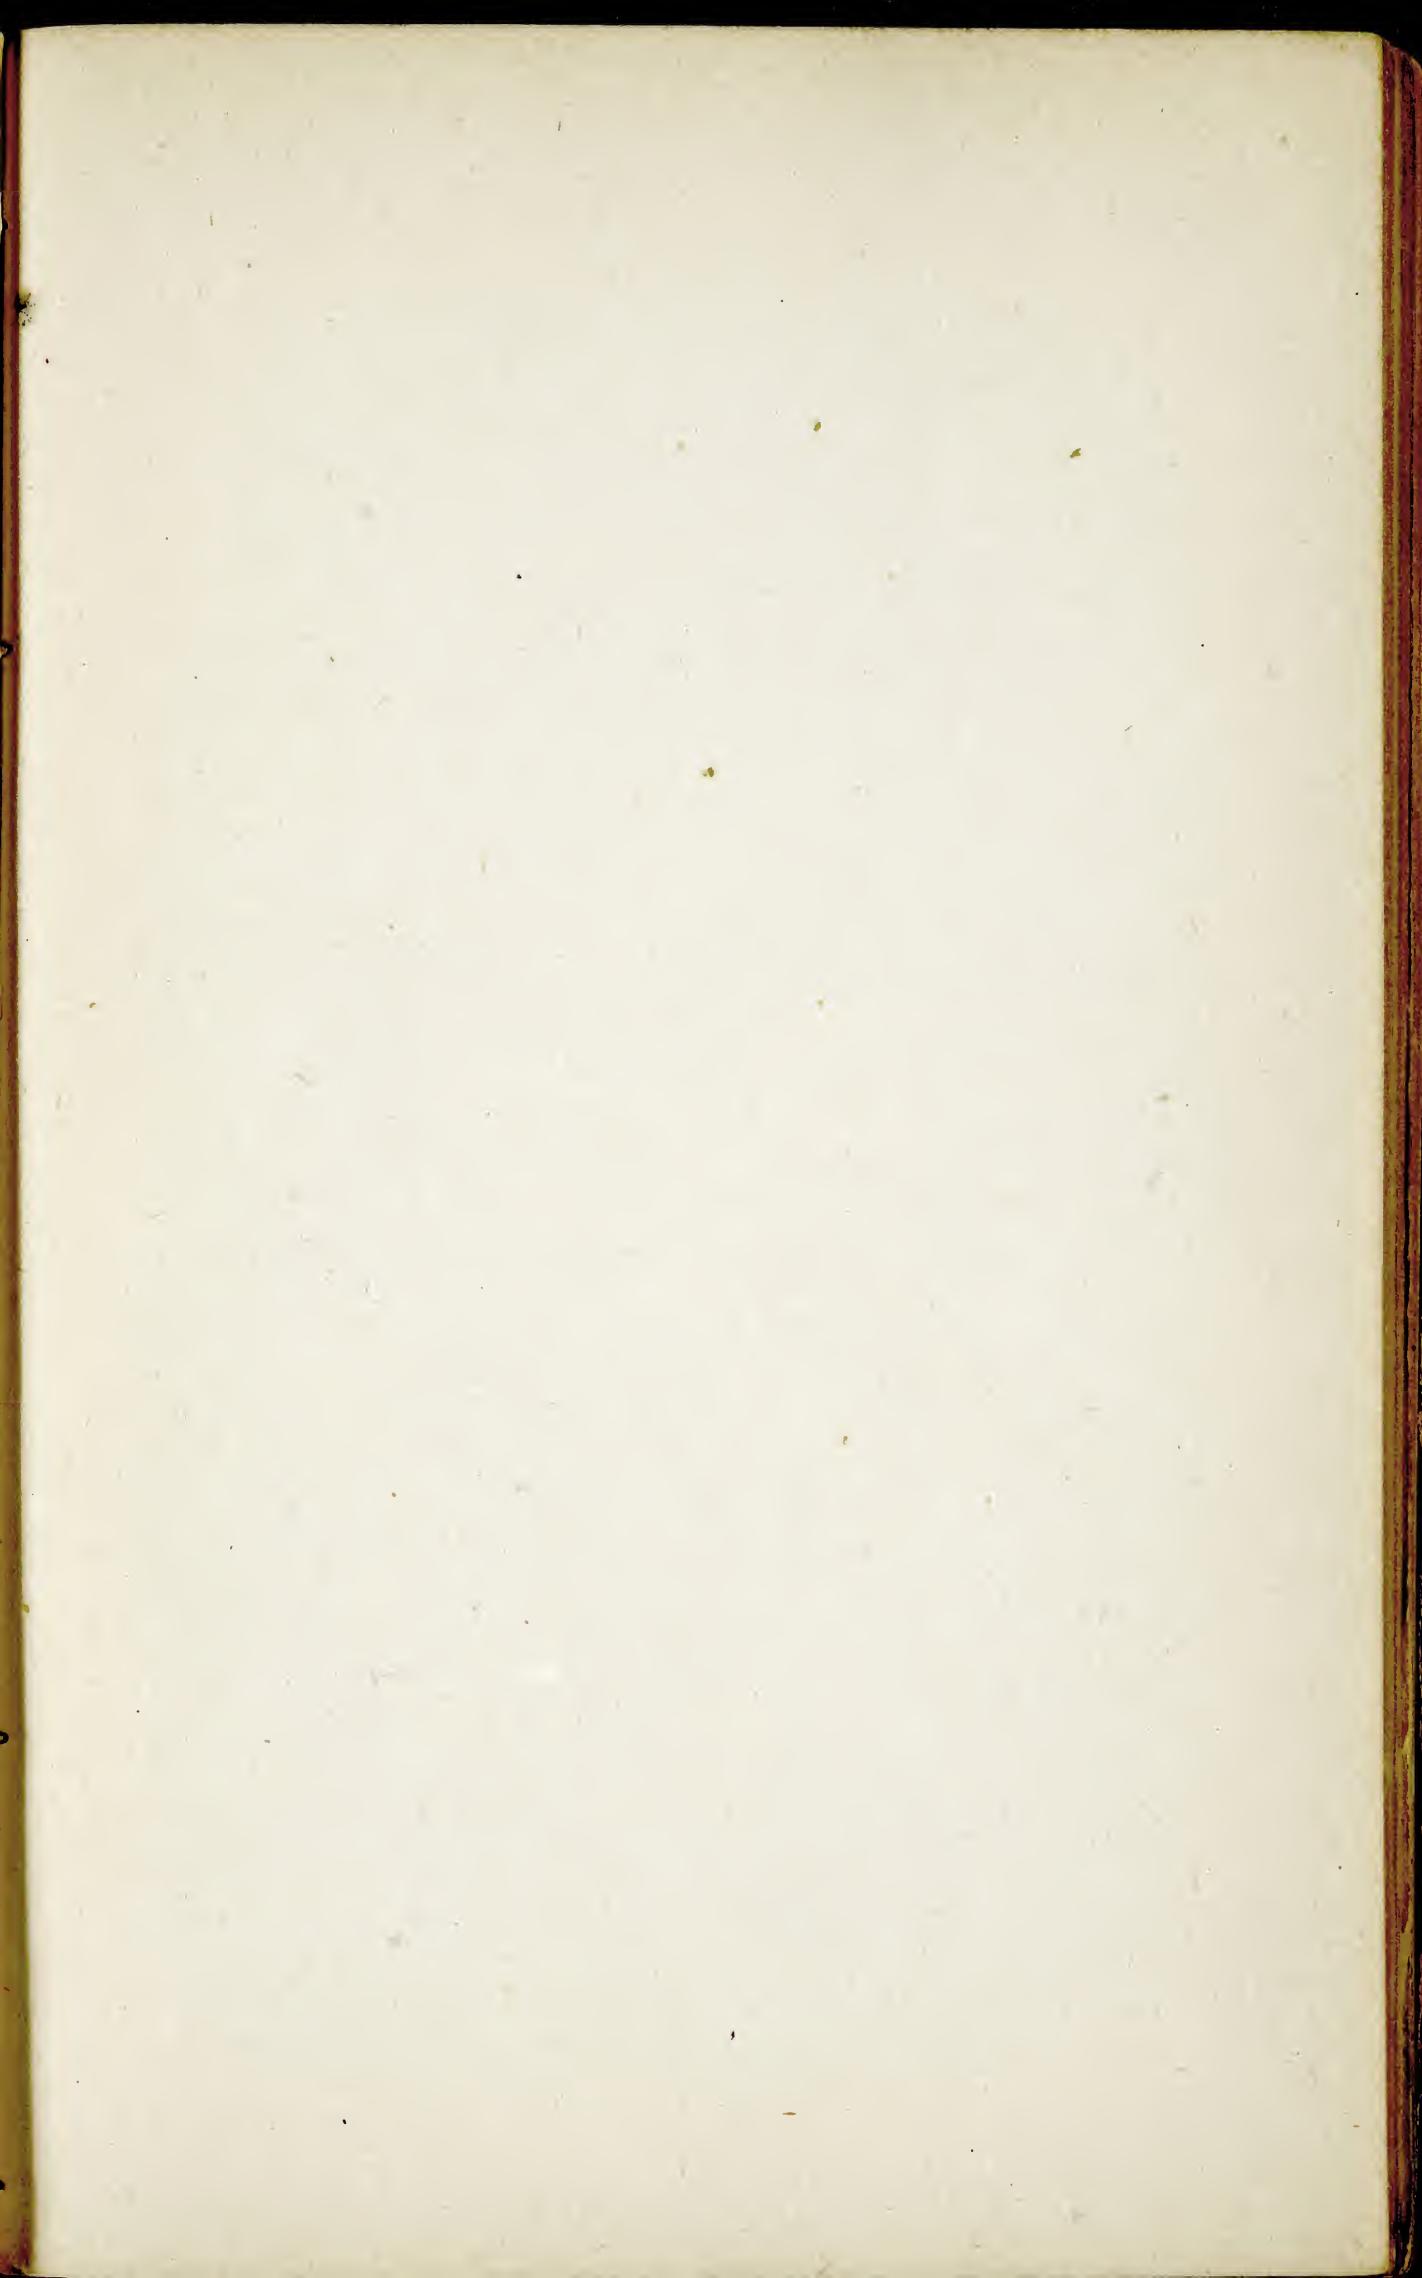

between 1 & 2 feet from ground supported  
by a single stem. Perpetuates itself. Cap.  
calcarateous brown. or a second cup, a foliose  
of a few broad lobes, & long petioles, worn a depth  
in the inner margin. Woody & tuberous  
at base, but from a mob. calcarous  
wholly enclosed in a thickish skin.  
will often be filled of a whoop's ear, spider  
web often comes in a clump of several  
habit about 1 ft. Mortilli & catarrh  
a sneezing, as the old say, and is  
a good test of the crudity of a child  
Thrushie, a slight cure with this  
but absent & hygienic. Cough perhaps  
need a little. for a Respiratory  
use cold water and drink &c  
The catarrh need most treatment  
your bath very day upturned. These species  
are short 3-4 weeks, but they differ in  
severity.

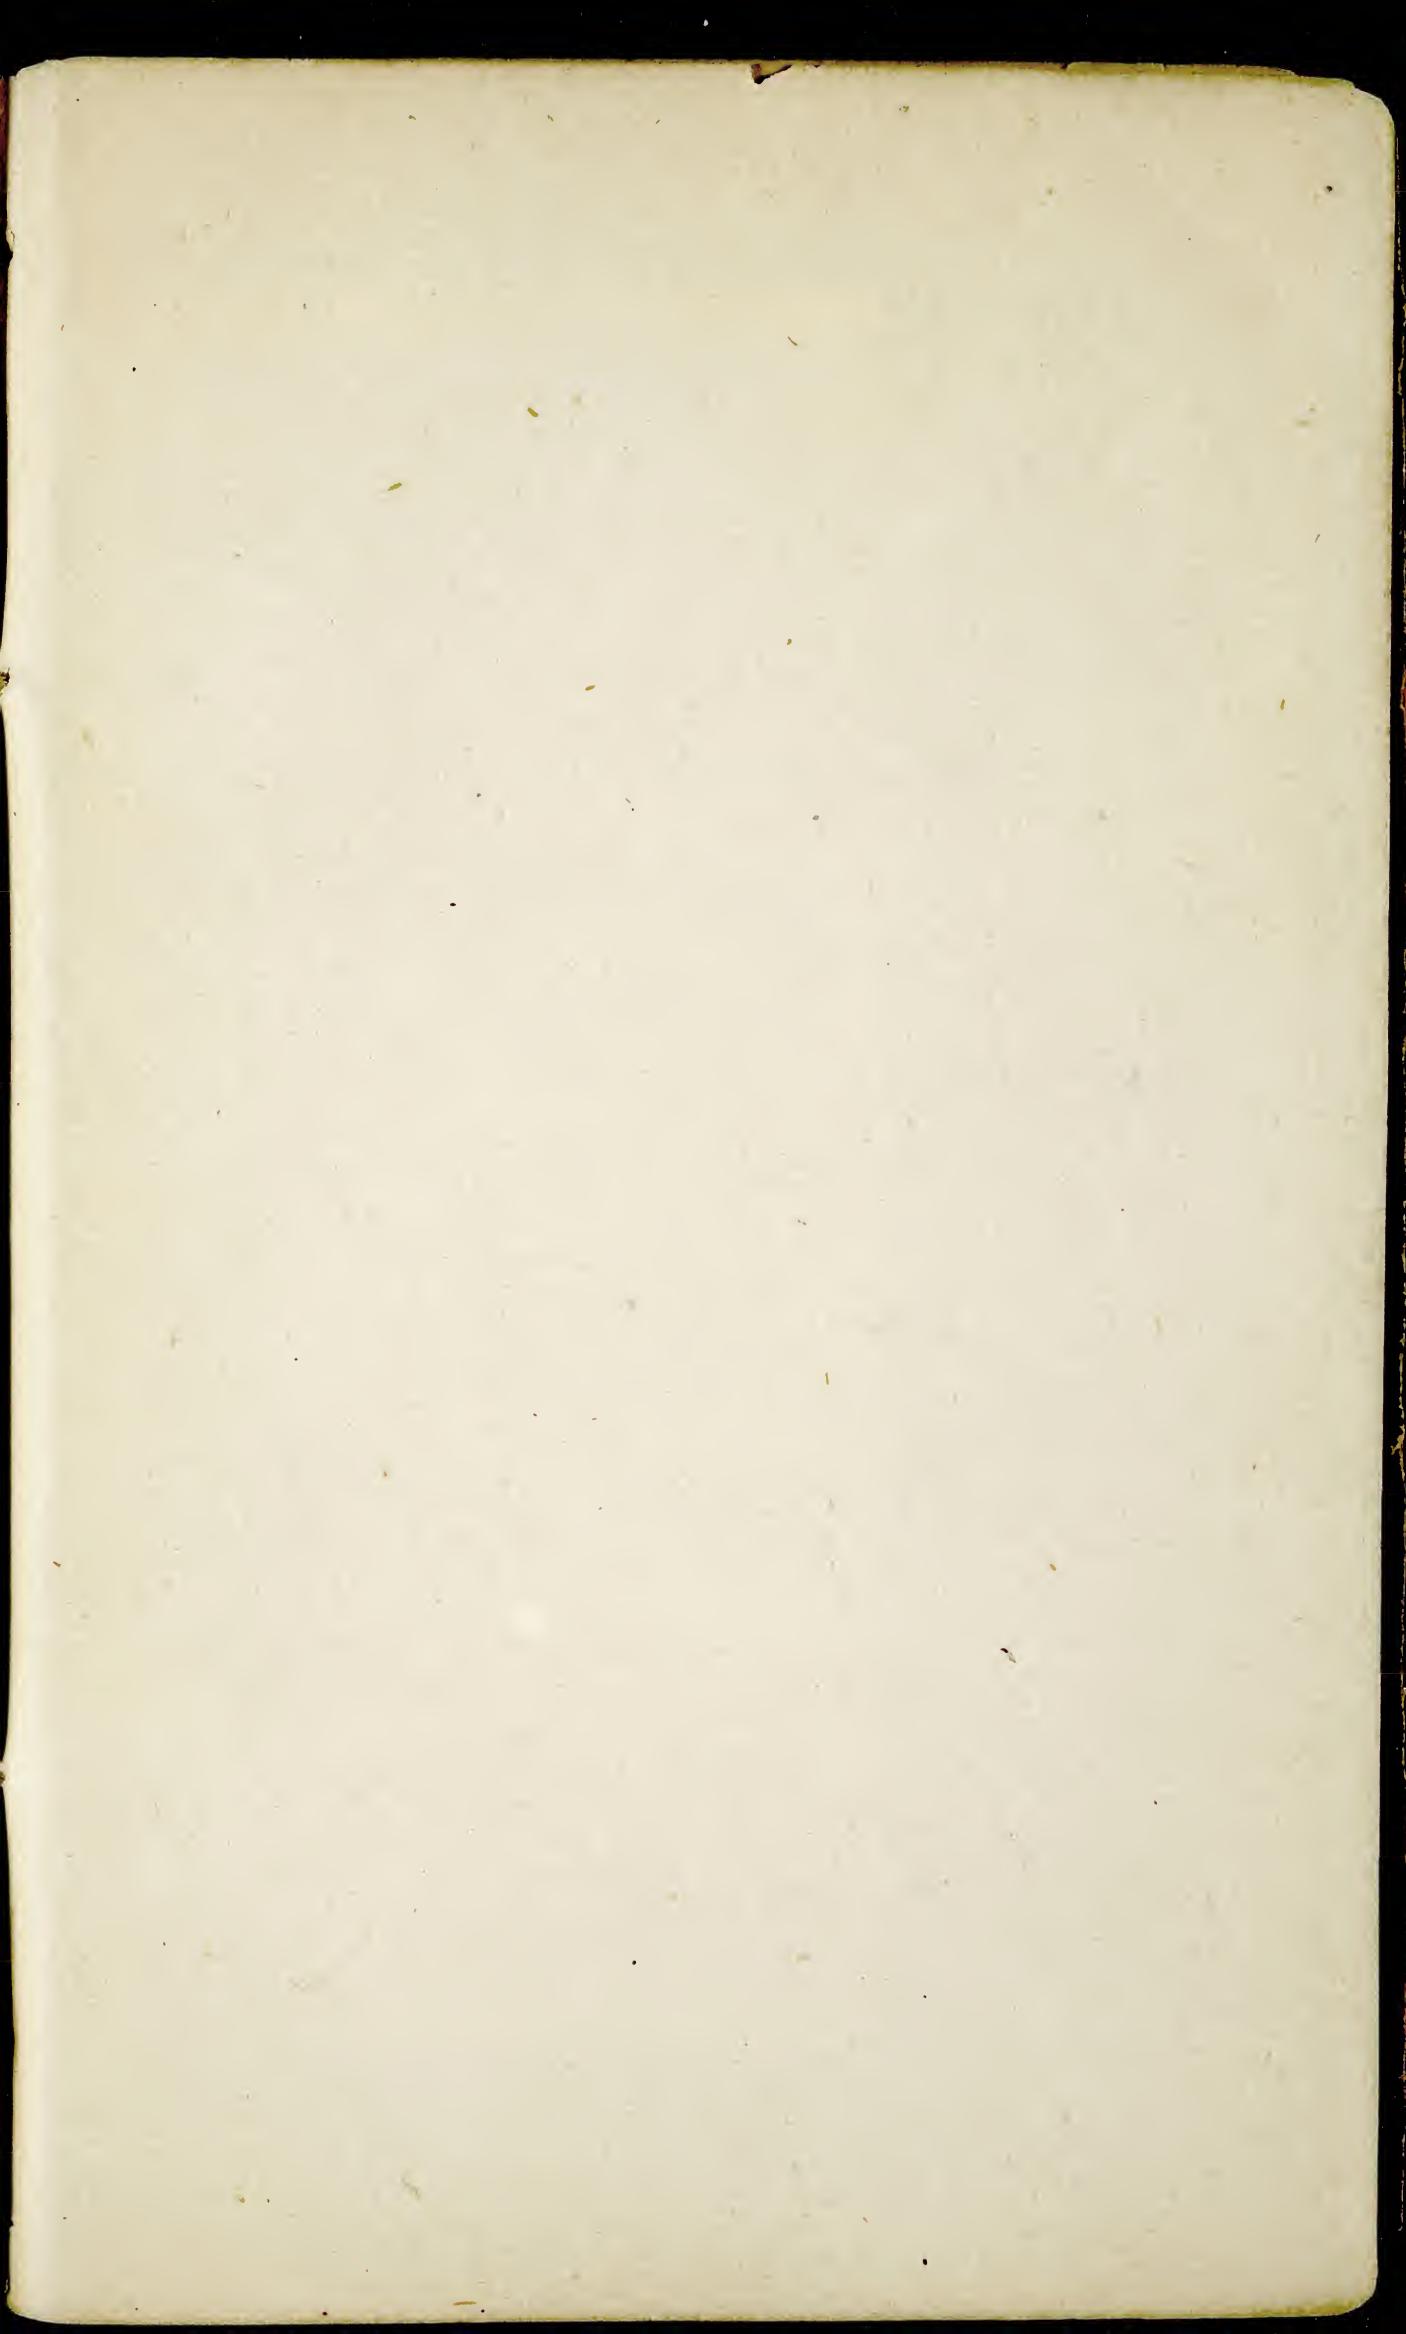

The collection includes  
the epiphysis of the skull  
among other discarded parts  
which may be found in a suitable  
favourable time have been  
apparently the result of the  
process of calcification.

Huelo, Lehrblatt 1868 no 12  
speaks of finding in the children  
of a physician who had made  
of dark hair, eyes and partly even  
partly brown skin, small bodies  
which he believed to be blood  
as Schwaninger & they were in  
well movement & found smaller  
bodies in the blood further on  
(in the blood)  
of gangrenous places more

## Sheath of brain

- 1st a meningeal covering - branched
- 2d. Pia mater from dura mater involving first the dura then the pia & abounding the substance
- 3d. Metameningeal or pia arachnoid

## Arachnoid & Choroid pia

Choroid pia is a formed membrane distinct from the brain - inspersed with larger pores, which are somewhat irregular & often red-coloured  
 Formerly thought that the cerebro-meningeal membrane was analogous to a thin membrane. The outer layer of the membrane is continued for a short distance into the surrounding part of the brain - i.e. into the cavity of the meninges.

## Branches of pia

Attein from present fever.

when scathed, no Doctor can treat so well as him

Palmaria cyprina. Thrope.

long live. It is after the hand is paralytic, when  
one deposit comes from the sweat after the disease  
passes & cannot be got off by a little touch the  
hands with (care you won't get hands) the pain  
of the affections is not more than when the  
itching in some cases, & out of all with him  
the ache here the rapid removal of the layers  
of the epidermis.

Case of Palmar cyprina (man) wif. Mr. Lyall Picard  
with it go red bare when the scales are removed  
the excretion of the spongy stuff bounded  
it is in the purple granules. Hands  
bare & dry always in the bone, shrunk  
in the fingers turn away  
dry, it perishes. There come come with  
indis who call in medicinal materials  
in part, salts & sulphur and crotho. Then with  
a spontaneous but a rare other sent to work  
in H.C. Only few instances, mysterious  
body dies. In eggs the amount of the water  
& salt are very largely for 24 hours in the  
hand some for 8 days often kept by a 31  
& may dry day 37. night can in six weeks  
see no sound day & when still disease, see  
also the scales all away, if may not speak  
out. It must be

(2) Syphilis face - stuff the head & cheeks like  
hairy parts. Two rows of efflorescences, Pustules  
on the cheeks, also on the head & neck, between the  
middle of hair follicles when it is pustulated at  
the top - swollen very with pus. By course  
they are not combined but by no hairy parts  
by about 6 days on the face, such a case will  
be very uncommon. The following are lesions which  
I often see. A primary eff of head is rare.

(3) Habotigo (bray)

Such. Sores often prounge from  
old people. Rather exceeds his. Itch  
increases in time &c.

(4) Habotigo (by)

Count. dark yellow colour abs  
granulation, under cold stiff affect. upper skin off  
skin of abdomen dark browned & with dark spots  
either an old scabies or an Proctitis  
gone better & still on

By 11 years old. Notice by the habotigo - upper skin off  
Syphilis ulceration. Lower part of both thighs  
and buttocks & back. Right side with  
all skin appear to consist in Lupus. L. - pink  
color, covered with scales. Lupus of the gl. & more  
extended. Syph. more local. They proceed from  
growing in the corners of skin. The eye few  
of them open before on the upper lid and in a eye  
patient, i.e. Sy. cut. scab - granular. Grown out of  
2-3 years. An ind. with the syph. manner com  
of the child however, either they are commonly taught  
to count. one with 10-12 days notice to heat strong  
and 10-12' above the earth to eat. in lupus often 23 long  
other white pustule

Lupus

This case Habotigo diagnosed by Dr. and Remained  
Syphilis !!

(18. man)

(2) Eczema. Often return a bather along in  
a given up person when such an Eczema  
exists one can always say that some ester  
of some sorts either retene heat or  
Simple starch or wet compresses are sufficient

(3) Acne of the                                  or or

4 Acne. Scrubulous infiltration of skin, i.e. tubes  
pulling the sebaceous off  
in addition to black gunk flat crusts, oily  
and large yellow crusts but by blood stained  
is + in people with coarse coarsely  
- sooty or tanned? remove the crust, then  
gratinate.

This

In childhood Acne is identical with Seborrhea

12/1/14

It may begin at  
an age  
and on an Eczema which however soon  
passes into the pure Acne.  
Pox like forms from Nodes, etc., at first  
- rings of Hæmosiderin in the scum  
then KD is given against it, it becomes  
worse when all of the nodes acne comes  
out

When one soaks in Bromine office it is apt to  
cause don't fermented serum.

Wadsworth

A game of undivided love goes on  
they have had it as children. It is always the  
a hunting dog or, charmed by an Indian  
13/1/73 (sketch)

Promiscuity (63)

Other diseases, Paroxysms &  
fibrillæ affect the blood vessels of the limbs  
as well as the affection when it is manifested  
after the removal of the spleen you don't get  
the bloody bark but an undiluted base  
of the sweat forms shows that bloody one  
Also in this case in the abdomen, when a  
Pat. is disposed to Paroxysm, in me, train  
charmer is sufficient to cure Paroxysm, so now  
with a Pat. disposed to water with which the  
skin is stimulated also on the face, of  
the case but a little no slight infiltration  
Also in the Ropponent we know all after long  
continuance of the disease, at first a slight tickling  
aphrodisiac more, especially at the same  
time, pernicious & hard to resist but soon  
& do with it a man in hundred die  
as suddenly, wants more or  
Paroxysmal to along slowly increased to  
the head, so runs over to the forelimbs  
& around.

Epinia Capitis, came, when cap. on the  
head inf. small skin of the hand & it  
causes the arm to withdraw.

of some oil we can make a constitutional  
balm, excellent - Combs, & digest it of  
an oil, in a child of an hour after you take  
it all down, by means of an audience in  
the hands of a physician.

Local, & when you do so, mix with either  
- man, this a mixture better than other oil  
of the oil, & Fr. Camille Co., mix with  
either them to make the balsam  
while you sit at the desk 30, you do not feel  
the heat for Esopus.

14/1/74

Syphilitic leg, dec. when the disease has no longer  
left the limb & appears done again (Selby).

15/1/74

Care of Rufina simplex. (Brown (35)) -  
Counts in the same manner as light though  
water proof and on the post surface of  
left leg, flat and moist, varying a  
cup from a button hole to half a large  
again as a thaler, surrounded with  
a reddened margin in which a few blisters  
could be seen. On removal of the crust  
only a flat base remained as seen, no  
loss of substance, but true Rufina without  
excretion when the crust was removed after  
active treatment.

An ordinary raw care (Selby) 17<sup>th</sup> because  
you might tell at the first appearance had thought  
healed.

Man  
Scars will be only & in rare cases painful  
unless a large one & then removal of hair  
in the scars before any scab is formed  
is strongly recommended as well as many  
valves are. 2. Draw out the hairs regularly  
make the skin soft first & it does not pain  
much at first by sharpish or with forceps  
as they are dead, pull 3 and put on lin  
soap all day & lap. bals. apply a lin  
18<sup>th</sup> ult.

Cuban Pox (man 24)

in Hospital 2 yrs

Cuban & others. Syphilis, must be during  
you sit, sit on the bone the sharp ends is  
on them in <sup>other</sup> case of a few it comes  
from injury, or the incision etc.

Tell me. If one can scratch the skin a strong  
possum or the hand goes on strengthen  
syphilis.

Syphilis at a red wattle points. It runs  
from a fifth to 7 mac. or papular. May come  
in syphilis like leprosy & a whiter one which finds  
abundant white. It is in the fourth to 5  
spider & so, and in this case you can see all  
100 & 200 days after passing description  
Treatment. There are also, the local  
be treated. Great pain, in women, but the hand  
hand glove & in cups dead, & Egg 35 is it on  
one place, another. Else, & no place  
will be covered.

Challenger. (Chal. II. 11. 11)

Feb 10 - 1st boat-trip from Woods Hole. Muddy  
surface of water with muddy bottom, over-all,  
as far as we can see, a very heavy mass  
of fine sediment about 100 fms.  
depth below surface of sea floor  
but goes on 2-3 fms. <sup>and it is</sup> toward the bottom  
improves. Tugs adhesives <sup>and</sup> gave form  
externally. 8 - 137724

Incline bar. 60 ft. for the sugar stand  
gasolines.

Supernatant water taken by a dredge for two  
days left until flat and up to 30 fms. on a slope  
Coprobac naut. after the rise of coprobac yesterday

Porella.

was collected. Green and yellow marine algae  
in Connell's River, when about the same  
point. R. Neph. R. Chlam. In young sub-  
sp. Open ditch. a. 20 ft. of sand.

R. by Phillips. When forced by pressure into  
the ditch remains fragmented

Harpacticus macul. is always distinguished  
by a scale, long at the centre of the back &  
shorter on the periphery. Depth in skin con-  
siderably greater.

When the irritation of hair of Cheveux  
is removed with the electric baton  
a small granulation is left & no ulcer  
also follows.

### Rosacea of the Scalp

To be distinguished from

Celoma which is much more in  
sum up & dry & crusty, clearing & it soon  
limits & the glands are not enlarged  
Favus at wrists, but the hair dry & little & fall  
out easily & the crusts are yellow scurfy

Pediculosis, more scales than bugs & always  
sharply defined by the hair

Eczema always covers first the hairy parts stand well.  
Syphilis; solar rosacea, the vulgar fit  
ulcer beneath

For rosacea: Rosene, washing sponge  
Tincture, may Roseum, oil rubbed in  
the form of oil, a sponge & rub'd in the head  
like a flannel & rub in the head for the  
Repeat this every morning, turn up  
the scale with a hand brush.

### Rosacea of arms

Large & seeps into the cuff, is dry &  
hot & cold compresses

3 1/2 Saponaria for one

16/1/74

(Holes)

half cloudy, along an <sup>curve</sup> course of an -  
old change or nearly where get the flat  
plaques, along from Syphilis, chance  
and a sprig endyloma (Tripe)

The two cases of universal vegetations  
(See Prager & Haardt both fatal)  
one not - skin & not - syph. the other  
not skin & not syph.

18<sup>th</sup>

Metz says that there is no better black  
pigment for the hair than a burnt  
coal. Rip the comb thro' the hair and  
then rub on to the comb well  
He also directs entirely the burning  
out hair does this while in a single  
night suffices that it will take  
no walls to turn a man to a month  
of snow.

4. Anguina

first month - a number of  
other ulcerative. Bone off in the  
first place, rare. May remain later  
& come out at paper, or ulcer on  
skin or soft. or with bone off  
of bone. This child 6 years in app  
such as is now found at  
first a great variety - a simple  
syphilitic. Rare syph. would likely  
a loss of teeth - and when, in the fore  
a sharp rounded. about the border  
of mouth, where alone this by ex  
posure the latter in the nose but  
surrounding never removed. In abcess  
in fore mouth? A subacute loss  
also in the other maxilla. Tissues  
involved not only so deeply without  
affecting the other neighboring parts  
it subsides also in the bone. Now the  
southern more in by white. The species  
subsists at this age. rare or never? covers  
the hands. Syph. is an ulcerous  
even suppurative. When the 3. has  
the skin. The

after some years other names than  
apple usually come into play  
at puberty or before.

Changes such as come with pubescence  
on, & it is hard to limit it when the  
woman <sup>does</sup> don't read; even in 8 days  
she looks up like otherwise, may be cle-  
vered by this former epithet.

Rest with Calm countenance. To calm will in  
the surroundings. In all maladies  
after epithet the best is innocence. But  
a Roberta by also, when in this same  
small child, give another (6) 12 to pris  
the eye covers & ring, cover mixed  
with in them one day, leg over the bony  
so in this, the mind & body.

Copema varia, away from working  
long enough 30'

Copema subvaria

Many 8 or 9 years ago,

I found when a man cut off the thigh  
or elbow you placed him to sit. Other parts to  
be dressed by brother - L. subvaria. Also had  
middle - L. papul. On stomach, but  
then as it remained & swollen he fear  
the gall went, or perhaps when removed  
it would burst. - I suppose it was - the  
third form, one place, death, & I think  
though - the incident is, don't tarry about  
in old people, while on stomach it's no  
place old people doable, the effect then  
often, the other is not so strong.

Nearby, and all over Cuba, after the em-  
barrassments, the strong remedies - an I think  
with, zebraw. skin or Cork aid. 3). of the 3 or  
4 eve. or so as get away the cramps & apply  
after that two made of boiled rice. very easy.

Eczema

2/1914

vesicular stage is variable depending on the  
health: if on the areas for inst they last a day  
or two but in the pus or glam they disappear as <sup>time</sup> ~~time~~  
some <sup>yes</sup> in a doubt but not after a few  
days go to pustules. This is seen in sterile  
women at the hands, great itching, and the  
fomites <sup>at</sup> where a thick fluid as in  
"hands of fat". The vesicles may confluent  
columns <sup>after</sup> swelling come on fast in each  
other of forming out a mass of it, a thickening  
of skin

*L. papulosa* a <sup>a good study</sup> addition to the vesicle  
in many so it a different affair  
In kind, areas in old scrofulous cases  
mostly in form fluid bluish exudate with  
- groups - are described & under scrofulous  
methods. often in older cases the  
vesicles are with scales covered  
also in groups, may extend superficially  
very little thicker before. Some in

adults  
Lay as bird. dark color. w. dark  
brown either in case of working of  
salt, or copper with brown feathers  
or by smoke of *Copra*, which burns it  
much. the hair hard & papilla. growth  
at margin.

L. subrosea a small purple parrot  
& venation. as a rule from E. seen. the  
wider wind. the bird comes fast. &  
a green fluid wh transparent is a com-  
bination of elements & in the head the  
upper filled. a tiny scrap of sebum  
& the blood is yellow coloured & a few  
L. Speciosa or purple dimpled parrot

### Therapie

Intestinal & glomerul & If former inf  
cases an isolated with destruction of inner organ  
then with a Magen Calant & can be treated  
isolated. Intermittent also accompanied by fever  
& treatment or change of climate & good  
blood movement with diuretics & several  
agents for worms. I give oil in *Sesame* in  
which in the favorite the proctop. excretions  
can be treated internally. K. I. & Arsenic  
both oil. is not as good as Arsenic. He doesn't  
that there are few who think it is his ability  
there are very. Oblique cases & a large typhus  
K. I. in them. or better arsenic in Ch. 6 g. oil  
in glass vsp. of 2. - 2 vsp oil of 7 oilers solution

External. Give the patient other such as  
cold poultice. To give Ec. in a salve  
of the skin & skin as other inflammations  
antiph is best for the part affected & don't  
apply until the acute stage ceases. The skin is  
very vulnerable in these cases & salves are  
conveniently of a weak - fair enough to  
act & improve or destroy a skin. As the  
an emulsion for instance on an exudate of which  
the skin is more liable it becomes more take  
a dis. or brittle water. In form of bath  
etc, in certain form Capes or Infus. If it  
is widely spread, or else when a poultice  
is impracticable on the skin thick &  
firm with Sulfur or Soda bath in Sulphur  
3 lbs. in 30 of water a bath of 28° or of salt  
bath a strong & violent Soda 1-2 lb in  
a bath.

Ample Ec. in general not with bath. Take  
a thin case a flat web or head, from one  
sheet, wrap a cloth. Take this away and  
sit in 2-4 baths. when worn wear it's next  
over skin in dry, of acute found skin swollen  
& moist use antiph. in a strong salve  
Always keep warm at 37

Glycerin 3 lbs

in the head  
will be suitable for small cold & dry  
if the skin is thick with this dilute  
or water, capo on I mouth.

or Sapo. Make a tall warm water & rub  
with flannel & rub in with the soap  
till lather & foam when not so strong repeat.  
Can when other strong treatment  
fails in child. Can in adult.

In ear. usually generated by such  
salve. very bright, in hair well cleaned  
or fine antiseptics. When you exgr. in 3/4  
lb or powder, mix with a few tiny  
pins in front of the ears. Some have  
a may as a salve put from them come  
use a camphorine plumb.

Eyebid give over the eyebrows also cleaned. In the  
water cups or antiseptics may. You do best by  
do not let it come in contact with the eyelids  
negative epithelio. salves, ointments, &  
is just little sprays

On mouth. come in child & vagabond an  
attack of lips very puffed. a regular bath  
and with calamine, borax, slippery-leaf in basin  
& bind it close & band. It will be bad  
If in white face, and in summer it dries off  
in years. Such often staples of often taken  
out with forceps in children with bandages.

Sycom, about the angle of jaw part and  
where found that even a part of skin - part  
only one place attacked, not so violent  
but only took a stand in the dog  
the one part. Progress differ in this case  
& unfavorable, not so bad a single week  
the chest also for a long time but  
published no, evident open cavity  
are very bright, however in a while the next  
till for the treatment.

Sy was - both cheeks crumpled to the hairy jaw.  
Black mouth dismounted, skin thickened  
and a long continued affection, kind  
of a furred dog. in offal season  
and after many exposures over night & then  
have no morning to a house.

Color of flocks, almost disappeared. had  
I, last December, an acquaintance among  
flocks by me of flocking.  
Pigmentation of the sheep a yellowish or small  
patches, composed of the soft of hair  
consisting, arranged in groups,  
which often cover the sometimes when  
a lot of white, the ear of the sheep is also  
pigmented so.  
To continue the flocking a green, yellow  
farm, getting rarer in green, come from  
Sallan Cumb all gone and the sheep  
defaced, bares, left. 16 cows. 8 t. 38 q.  
water for a solution is among the hair  
in which cover the boyen is yellow, gold  
color. The old people made the boyen  
of the small a mouldy one; under

the larger tubercles about of long  
outline & of short time not into  
the hair attached. In the shoulder  
the hair comes out a small hem  
of hair head round then the hair  
spreads. It is penetrated by the hair  
& elements called when long comb  
then the muscle left present the  
greatest part hair, but a short  
time but no long duration & the  
hair grows again.

Hair brittle & at a place the finger  
elements are found.  
Inflations on the skin very often it  
spreads on whole of shoulder or  
the two scapulae they penetrate a  
short distance below them & H.  
toussaint. This is the wolly hair part  
in other spots with the hair & tissue  
surface seen as in the hair on  
(a case when it was in the whole skin  
& hair) applied a few of hot sand  
the under comes also in mammals a  
dogs & mice & rabbits  
what strike figure? Schubert discovered  
the elements first in 1839 & was cut by  
the action on submucosa O. lactis, O.  
& the first one the third form of Ordinary

Ponasis. a deep-Purpureous & dependent  
color. It has not a sufficient over-shade.  
Anemia when taken a long time ago and  
Purpura it commonly precedes  
pigmentation of the patches  
a sever fever will cure or Purpura  
fully by blisters & sweating all the same  
moment. Chiefly in the legs.

Yours this noon a Fleury's solution  
it would also have. Give bath in  
this emeticale case & perhaps for  
an hour of Faji &

28<sup>th</sup>

### Erythema nodosum

Legs & arms place size of table and colored  
an infiltration in the spots. hollow in some  
place a little bluish green.

Come in group of individuals. children, both  
bluish green patches often hard swelling of  
the joints & eyelids. sometimes chronic, no other  
changes appear looks like a typhus. In the second  
hour a cutaneous one.

Coprona of left ankle & back of foot connected  
with various veins  
Develops the heat & upper limb. Dracyli's  
change my diag. doctor for 8 day, others  
can might be used

### Erysipelas

acute. Herpes, tumor & will  
soon appear. Because of virus again  
Tarsus. becomes again red. also

Soon after acute disease. If case is bad  
these likely to go. Usually accompany  
with a Schuppan formula & a Debombe.  
Alcohol 3 vols. gly 3 ii. for a wash

Syphilitide papulosa from man splendid case  
Throat mouth ill still a little indurated  
on the surface. A Hubo. suppurating  
all over the skin of belly, chest back & chiefly  
by arms on a few days numerous papules  
there on the belly & chest covered with scales  
& somewhat pigmented. Some on the back  
arranged for the most part in groups  
extended transversally about the size of  
a shilling occurring p. 20 - 30 papules  
Had his changes in November. Larger folds  
of the points more affected than the straighter

Psonaria vulgaris market case 1281  
After the skin about the nail - around patch about  
4 inches in diameter, covered completely with thick  
scabs - an eroded slightly ulcerous patch also on  
the penis, penis & scrotum also between the fold of the  
penis. On the head a small  
Tub. st. fl. quite free, 2<sup>nd</sup> & 3<sup>rd</sup> toe  
stom of its toe attacked. - a jaguar's  
another in last year that a good deal of Pson  
& great ulcers so far on each foot when  
seen on the Psonaria.  
Has had the Pson. 6 years. at a few patches  
also on the scrotum on the back

apply. Lebarthia on the spots should bathe  
dark; same with the head, before begin-  
internal treatment. afterwards Tar bath  
take & paint the patches with Oil. 7 a.i.  
& Sapo verde or turmeric apply. to diminish  
the thickening

### Molluscum Sebaceum

woman aged 23. Many tubercles over the body  
from a pea to large size. red color as the  
skin part. dark col. flesh,  
some ulcerated & healthy yet & others are  
then healthy & smooth but one or two  
comedones seen in them. The swelling  
are soft & if pressed get out.

When the Salymasen collection the following  
got from on the outside - a kind of  
*Molluscum sebaceum* found. & got large  
*Silurus sebaceus*. found with much thin  
tissue.

Syphilitis papulosa a venereal st. named  
ever year & ch. dead small brown colored  
papules covered with a thin skin surrounded  
arranged in a half circle from affecting  
the back of the arms. This comes often  
in old people as might be first appearance of  
syphilis after even a year passed  
the syphilitic having been much healthy &

Acaris scabiei. See strongly modified gall  
- Two or three weeks - no matter how strong it  
pours a yellow colour  
comes chiefly from drinking beer since the bill  
chafing, scratching & so forth. Some who drink  
too little & get bad nourishment, often  
a poor student, are far as a scabie  
& then a redness follows & then an acre  
then women with sexual desire, or stim-  
ulating the sex but the chaff also induces  
most diffuse redness. Chewing tobacco  
produces it. Disturbance of liver, Pectoral  
may cause small acne with Adams  
face & eyelids.

By evening take a warm bath & put up soap  
water & wash abundant it & then take this  
salve. Weigh 3 fine Bees with an  
30

### Eczema actinum or rubrum

Moderately it is up to the nail reddish, soon  
it will scratch the most also the nail  
and swollen on face, swelling & diffused  
in face & hands. When dry it is sharp bound  
in this way it spreads for it went under the  
skin rebounded. On face & neck also under  
fully bounded. Different parts in diff. spots  
can kill alcohol & carbolized. If very gall  
3 vials. Glycer 3 fl. & wash 3 times a day &  
then take anything will often make it clear  
& disappear. When skin inflamed it goes  
with this melted but if not skin will

with much water. Sample method will  
do as open cat & oil spread on it  
but in the above fluid 3 times a day  
(as on Tuesday) Feb 2 much better all now fine pale  
only in the wrinkles.

### Lycium Margination

On the same wife of Shrub. when such  
comes the redness over the leaf if  
is bounded by a band. raud, brownish & by  
all exterior, there an intertiss pale by some  
area. Same may come in fat suddenly. When  
works long time skin gets infiltrated & covered  
with scales. By then red when out, and  
when with sharp on skin which  
often in children a sharp pincer press  
at these spots. In persons who not much  
there very common on the exterior surface  
by such. the infiltration & scales in  
it. When any parasite found on  
any external reddish part. so one I  
laid on the red sharp bounded &  
at first but it became red & found an  
Lycium marginatum. There spot from  
a favorable medium for all these parasites.  
These parts spread of scabies in a gradually  
form. Another form. When the  
other or part of flesh a white comes out  
which a part when a scabbed out  
at. It goes out of face the tongue & in

the former schedule & it develop the  
as a 2000. haf miles - when first can  
find the Poly elements when old the skin  
infibulated & can't find them.

The cure, air transudin, determine  
whether cure often after the skin becomes  
more clear or some remains of Poly ch-  
ronic. If you a surface but change the  
the oil, make it more. Take care that the  
any time used is pure.

Anhydine in alcohol for 24 hrs, then dry it  
work & bathe every day

### *Acre dimidiata*

very bad case, covering the whole face  
no good taking such a case into the hospital  
though could cure in 6 weeks, yet a  
nurse would be hard to find in poly  
a bad case.

Feb 2

Care of Prognathus returning over the whole skin  
diffuse & much scattered. Not very old  
Prognathus is fairmable.

warm bath & daily rub with a mercuric ointment  
about 3 hours in a warm bath (28°), when a  
soft pomace - the top - still on the skin  
placed again with 2nd Poultice & warm plan  
face. soon sealed. nicely & safe all  
& very simple. You tend. expect  
& may. of a relapse - which is likely as in  
all hereditary diseases - a mitchigan  
wh - out a skin from other disease. must  
wash daily, allow & once a week a warm  
bath bath with perfumed

Care of Lupus acuminatus

1847 & this

First heard in 1854. & then in 1869 between  
the time well. Now a relapse. May while  
a thin creature, then the length gone  
which it has remained & not affected any  
but the face. Nose pink & wings & nostrils  
an ectropion from contraction of cutaneous  
tissue. also the zophus destroyed by  
it. There was anything more

Lupus hypertrophicus

Aug man 22. An acute  
decubita on back on the right foot, back  
& sole. On prosthesis from different parts in  
it which with broken are covered a thick  
crust, are covered up with furuncles.  
Some more or diffuse broken. In the foot  
sole in the center a nodule & in the periphery  
the same broken. What is this? If the  
broken alone would be an awful sight but  
broken covered - a graft of the papillae  
smooth, smooth. S. Kuhn - is it not would  
break more dry in deep. Here below  
a Lupus & a Papillary growth - a  
Papillae whole smooth, an hyperkeratosis of  
skin as a papillary skin but it comes easily  
be in large surface. Most think of Lupus  
- a Macrodysia or tumidose. Lupus does sometimes  
as developed such broken & it is especially  
in the experts - Lupus hypertrophicus  
comes chiefly in the toes, mainly in early  
childhood. But with salivation a  
Salivation causing - & even at 3. 3)  
Aug 31 on toes for 3 days & then seven  
before a cure remove the broken with  
oil & alcohol. Must soak at the same  
time with plaster. Graft covered  
that doesn't seem succeed.

Lecanora marginata

8/2/34

R.

Acid Carbolic 3ii

' alcohol. 3i

apply to the spot

It attacks women sometimes, & in both sexes is characterized by its remarkable obstinacy & tendency to sap through when fully developed it looks & is not unlike precisely like the helotium var. <sup>lentiforme</sup> of gomma yet the long obtuse cone often one of six & months & the short & dry of the other form a radical difference between the two.

Cutaneous an enlargement of the papillary bodies & invasion of the epidermal layers  
I. simplex see my polygonal spots in which the center is a whitish  
of yellow & greenish colors they  
I. suspensiva epidermis thicker & diff  
colors, usually when papilla are so  
said that they form pustules in  
the skin called

I. angusta or warts have also often  
but when a child has been neglected

and not varicose, the case a  
disease which spreads large scales it is  
a specimen from of Feb.

In simple cases the floor surface of the nostril  
the penis & scrotum are free. There cases  
are the most common

### Syphilis of the Nose. (woman)

The nose may reddened & a slight soft  
swelling over the change seen. In this  
Woman W. M. a subscriber, a sharply defined  
Isula tan a Tuber a syphilitic

an abscess wh. one day last year, a  
simple Tuber, before it is one part  
such a thick bulle it has lasted al-  
most a year & over the surround-  
would be affected.

Syphilis is a disease & disease, a peculiar  
affection of the skin, you're Voluntarily con-  
tact the Sarsaparilla

Can be nothing but Syphilis with such  
a sharply defined ulcer & the sarsaparilla  
& would fail altogether.

It can occur a congenital, not a  
recent form as the Cancer & whole others

Eczema acutum. face, ears & right ankle  
all four, exciting, also itch most  
does the I. depend on the scabies, but  
the face, no sores, in the feet he has  
laid bandaged on with some plaster  
& cured the Eczema. Aronica trichotrichia  
use to many cases of Eczema & not only  
in the place applied but a wider space  
near the face &c. And important  
to the change for the progress.  
Take a day with Vay. & against  
the scabies & use Vay. Drachli in the  
face & ears against the Eczema.

Pityriasis versicolor. differs from those  
in that when you scratch it can be removed  
Palish smutty brown. No itching  
comes chiefly in countries where people eat  
meat one man not the other, when  
it has lasted long usually a little progress  
benign. Vay. and. Rab. & Flor. with. Ol  
Rusi & 3<sup>1</sup>. Coal alba Sapo ioddii  
Vay. sulphurata 3<sup>1</sup>, Rab. Pemmar 3<sup>1</sup>  
Take a piece the size of a walnut for the chest  
& another for back & rub in & when in  
3 days when for this is spreading no more  
continuing the rubbing for six days & then

or two days continue to offend the nose  
not without subbing in & on the 9-10  
day take a bath

5/13/4

L. rubra <sup>in head</sup> only in grown up persons when  
in the head & neck, can you see the  
fear of children & women in the con-  
dition you are apt to produce swelling  
and suppuration of the cervical glands

Spoon Gall 3 oz gly 3 fl. drs. after  
the tea has been employed for some  
days & afterwards with any tea powd.  
Bixa alum 5 oz 3 fl. gly 3 fl. is good  
also. at first purul & then a  
day or two of well borne continue  
~~then~~ the but of not well borne in  
the spoon Gall. gly

### Eczema papulosa.

along the inner surface of the leg  
work with brandy & the powder with  
meal or cinchona

### Purigo

dark pigmented belly with scabbed  
blistered on legs a brown looking affection  
over the skin & blisters also and when  
left fond skin thickened & infiltrated  
especially inside. Have to decide bet  
Pediculosis & Purigo - the three that  
produce this excretion on the skin

Pediatric - the second being it is divided  
Scalies. It is pigmented too but looks  
at the hands but may be a <sup>only</sup> residual  
pigment & then difficult to decide. Much  
the credit of leg examination will not  
be such thickened skin or covered  
with brownish powder. Again the acc-  
usation the heresy and probably found  
it has failed from childhood if young.  
In axilla often find great elevation of  
sweat in youth, drifts. There are secondary  
appearances but also, whether with  
wh. the disease begins, on the trunk  
axilla, breast, convenience. They lie in  
the skin & cause very great trouble  
in young person the mother mixed with  
urticaria patches. When Brest, not scut-  
tis, particularly enlarged & break & form  
broken. Or it may be complicated with  
Osgena. (When long standing find  
all evidence of pigmentations chiefly  
on the trunk)

7/14

Syphilis: Is a pustular inflammation  
of the skin not a syphilitic one. Other  
inflammations as by cat may attack  
the spot & it may become ulcerated  
& must not be mistaken for syphilis.  
Syphilis:

Primary & second are called in their  
nature & even in their course, only  
different forms of the same affection  
(Chancres once when infect. himself  
of an infected part get a sight of in the  
deep parts or hard one).

7/14

Pox & Lichen without difference  
either ulcerous, no ulcerous, localized  
affection or of general & especially in the  
latter affection. Generation not so general  
& it can be cured. Pustules & crust never  
come in this while in Pox they are common.

Pox without (as in 1-6 pages last)  
came this morning with an erythematous  
swelling over the body & altogether much more  
faded & like of flannel & not the body & legs  
swelling away with Lebrettan & Ol' Cadin  
at a pg. & perhaps as auto appearances  
in some parts are noted. & in

d. jec. acel 3+1 Acid carb 3+ more.

apply sulfur powder with liniment  
Cone disseminate & undiluted

over the whole back is minimum  
considerable scattered between them  
7 o'clock at the same time apply 8<sup>oz</sup> cups  
all the undiluted spots must be ex-  
posed & give the sulph. gly. acid, <sup>carb</sup> also  
pt. ag. in a Flaminge solution & rub  
in

### Eczema marginatum

Hermann has had a case of H. tinea in the belly  
and 2 fingers on the same person

Carbolic acid 1% does not destroy the  
vitality of the pity. element must use  
a solution of 1-50 to 60 or

Eczema face & arms. on the face much  
irritating on account of the numerous vesicles with  
infected base. come off from one healthy  
Sufficient to apply cold compresses

### Syphilis

Cicatrices in many parts, legs back an  
of upper system. Only 2 years since  
had a chancre

Purpura rheumatica

on skin blache of legs, pale red in  
marked spots which do not drap  
or form a few on the belly. My spots  
always with poison. hen does not drap  
but with a hemorrhage or pigment  
ation. A case of Purpura. Leveal and  
P. simplex. Some people have these  
on the legs spontaneously & for a long time.  
P. articularis. Some people are always  
tired, dark, & swollen apparently  
the stomach gets affected & under  
these spots see Purpura spots  
a Purpura, Rheumatica & Palmar. The  
comes with them. The red spots on the  
skin first partly disappear by pressure  
afterward not but the old red marks  
of haematuria seen. often found all  
in one with this.

Purp. papulosa on legs spot (back) in  
colds & scrofula under often affect  
Knotches. It is a tumor like which the  
spots are made in Knotches.

P. variorum. In these cases, either from  
an other way point haematuria & blood in  
other organs. in Sydney, each in constant  
they usually go together before the tumor comes  
out. P. scrophularia is also another  
form, & there are as in young

individuals. They are often arranged  
in groups. Not of very much importance &  
children won't keep a firm position.  
Occasionally it comes on a chronic affection  
or diff. suddenly. sudden.

Case of scabies which had been cured  
I had left the Hospital for a week  
returned to day with a brawny looking  
on the legs the skin pinkish or also strongly  
distended and itches much. The question  
is whether this is but a variation of bed  
or a Primary. May be another of bed  
yet remains, & some on the back, for  
the typical dorsal arrangement of Pedes.

### Lymphatic of nose

A young man, nine months earlier  
noticed at edges of nostril. on the  
inside the septum a circular, protuber-  
ant like a Cepha or lymphatic, which  
L. out of a tube but no Thrombus or  
tissue. In m. Lymphatic found such  
a close connection with the outside intact  
in this one joined out on the Cepha  
what from & where. Cing. soon after birth  
as was Pamp. & Pal. when after birth  
put to sun skin also black. In m. of the m.  
when later 12 - 14 years than on under the  
nose deep ulcer ab. scabbed over green or  
black on nose, before & the nose

Process is gone with in a few days, during  
the time, such following occurs especially  
amongst cattle trace disease loss of hair  
with & twigs falling. How now it  
is a congenital & when found such a disease  
in 14-15 year or young under exper-  
iency not to think of acquired.

Ch. syphilis mate, may soon be cured  
of a healthy wife more when the chil-  
dren the same small or by phthisis  
Paroxysm slight when will both get  
cured in 20-30 days but慢漫  
& painful fever may continue. However  
now before care of Paroxysm. by a course of nitrum. always the best.  
When from the birth of ch. 9 days & intensive  
a favorable prognosis. The eversion  
bladder of not noticed may destroy the  
more & with voice till it slows start.

### Syphilitous ulceration

From in the left hand may ulcerate  
passes down hand & the border. sharp  
defined. also a spot when an abscess is  
smashed also to be look in the brain  
under the right clavicle up round a working  
spine. What is it? That either caused by  
a Li. carb. or by phthisis. Upon never in  
this way takes of all in life. This ball body  
I have observed also found the heart, upon  
& standing double speaks more for syphilitus

But also in *L. vulpes*, since it is noted that  
*Quinia punctata*, but this exceptionally;  
the one open ulcer speaks for *Syphilis* but  
the rest of the symptoms & other speak more  
for *Sarcofila*. But with *L. vulpes* & *canis*  
acne frontalis vel. rosalia  
comes often a rose & chin. along dorsal  
Mucous punctules & by the butts & when  
woman get a sublab. los. along by women  
with enlarged mammae may  
be mistaken for *Syphilis*. Ocas. by men  
in enlarged stomach. The crusts like nodules  
at the pores & when they are removed the  
sublab. los. are the diagnostic points.

### *Lupus* *argyrophthalmodes* vel. *cay*

On face, cheek, thin white scab, show-  
ing on nose & cheeks chiefly. Cannot distinguish  
from *cay* but can from the situation  
often. There are thin scutell & excrements  
not normal like others. They are the result  
of *L. argyrophthalmodes*. On the coat, are multi-  
plicated light brown spots in some very  
reddish brown. To see *L. vulgaris* must  
be distinguished. These are each of  
them foli. small and pointed with  
bare red borders & pinkish smooth.  
Accumulates about it when removing  
dead whitened follicles. Next mon-

coalesce & form patches wh. edge  
periph. meet centrally with a thin  
banding. The circles merge & give form  
as in *S. tenuissima* & in the middle  
ribbed, cecal or brown bracts.

When the sweat-glands have been lost  
the skin presents the white undulating appearance  
of other parts. all over head, & fingers  
hair falls out & hair-follicles, undivided  
& covered with scales & same eccentric  
form. May also ulcerate. On hand back  
from great heat little Pores. In man  
most common the lips affected & with  
spider-worm. Comes out before the 20<sup>th</sup>  
year & most in females who are older & an  
why call it leprosy & a name for the hand  
full of glands why not leprosy. When  
in children they find the dryness  
are deeper but not even seen but observed  
that *b. vulgaris* has in cutis various  
smooth which pierces the the layers &  
are seen as 'flecks' in the surface by light  
and that thie the ergnia in glands, not vessels  
at the same growth also come from the glands  
The same cells as in *b. vulgaris* same growth  
in one more diffuse & less evenly about  
the smooth & ab. glands.

Progress. Would another hand & not  
of the whole fore hand. 2. 30g of a single  
spot, so thick is it. The duration is say,

variable treatment. Must be at intervals  
to avoid accumulation. Cobalt, oil or  
local use suitable. Open the follicle, remove  
contents. Inject in 50% alcohol 3%  
alcohol 3% filter & add 1/2 Lanol. 3%  
1/2 Sal alkali. Take a flame & melt it within  
the hair & open the follicles. After it has  
been alka 3% try simple 3%, or 1/2  
Rock salt. The other method. Or after the  
lips is dried, on it till inflam covers over  
unflamed tho' a whole insect apply  
in single case, <sup>canard</sup> canard, & one lap inf.  
w/ a solution, but spirit put powder  
a few g with S. canaria being applied  
Cobalt acid repeated in 1st few weeks.

" " " " " alcohol too partly saturated  
penetrated in the skin after the application of  
the S. Smith's. Chamois and a HCl oil, in  
this time 14 days between. Hale can  
still 0. water aqualet, leaves no blisters  
therefore the effect is there & can use it  
very two day's. also mean for about  
a week H<sub>2</sub>, & iod glycerine. The latter pain  
ful especially of used after the S. Smith's  
No other times nothing happens an ulceration  
not is the more ever destroyed. This can  
be remarkable from the fact that he was  
but attacked on his eighth year.

Leprosy subacute (see my place back)

Better than worn - anything else  
now ready for tea but as do not know  
whether it will be well borne use it on  
first over a small surface with oil, & add  
when it burns too much just apply a little any  
better or what's about to me answer with I  
<sup>121</sup> Hartman can well on the next. not so well in the beginning  
<sup>131</sup>

12/2/74

### Lichen and ulcers

Man aged 34 in thigh various ulcers or crusts  
aematous of hair head of foot stand single  
& often aggregated become covered with scabs  
in this disease from Provençal who cure  
when fresh the raw soft exposed peripherally  
at times the disease find other matches may if  
the brandish her much & the middle of thighs  
salve blood on the periphery the hand less. May  
times & fix in the skin & much inflamed  
also & if in a high degree cannot move  
without great pain. Nails also affected  
hair falls out - often out the nostrils, the hair  
fall is found & the serum is in the Nostrils  
& sometimes in the glands & get the channel  
for accums gland. The cells of the hair shaft  
proliferate greatly project out & look like a compound  
gland. Wind pipe enlarged. Of a few  
days ago called Lichen. old Pg. man aged  
many so. Two now Let me give a Lichen  
subacute 3-pubescent & not a ulcerous  
L. aciculatus. Urtice papulosa. but two

time thickness. Cries & grows up hasty  
persons. often warmer, the rarely. A  
single case a woman, an acetic foliation  
in the Brantingham, lies in the breast  
& other parts & the a patient of Dr. H.  
in Grand Trig. In long standing the  
furan get so deep that phlegm is lost  
in the face - the old Solon said, "that  
short the eyes in when the mouth  
His treatable disease & the women of  
Acrea, must be in large doses  
be begining 3 acetic pills after eating  
& then iron powder, & 10-12 pills  
at first, &c in winter but gradually  
in 4-5 months a cure. Pigment re-  
sumed behind after the sun with Lick  
also see the same in Persons. Must  
local treat, warm bath 3-5-6 hours  
& paint the skin before with tar, or  
water alone of sulphur water, no soap  
or jugs or fat & all they throw the  
tar & bath; he may arsenic this dissolved  
in oil when in the full to 10-12 a day  
of pain in stomach, occasional rheumatic  
spasms in the joints. H. has seen only one  
case where 20 pills (Ars) & 2 gr. an hour take  
daily by the patient, the got over after it  
but health & nights are often forced to rest  
a short time. See that disease which in  
this form manifestly may be removed  
for me another as Persons recover

higher values & *Athyrium* on it. In the case  
of *Anemone* & *Adonis* - either need  
very shaded for this plant. *Anemone* will  
afford new worth before the reefs.

### Crassula

Raidly now - about green, with yellow  
but much infiltration of light green & tan  
above & not with a bush or matted stem but  
if kept all tall & when come out of black we find  
many Rockads. not the whole & this is best  
for shade at a time. Shared on May 18th  
in the sun

### Syphularia infiltration

The stem naked & right shoulder, weak &  
& poor infiltration about them. The colony  
left of the one of the caudex as far to the left  
& strong form which is excluded in the  
sun.

May. 9th *Gymnum* of 37 along. 31, dry, but  
the evidence of an immigrant

Paeonia (See 28<sup>th</sup> Jan) - Has had a course of  
watering 2 a day for 3 days then one a day  
& now has the soap on his hand & piece under glass  
and the plant about the mound is still very  
unfertilized

## Syphilitis

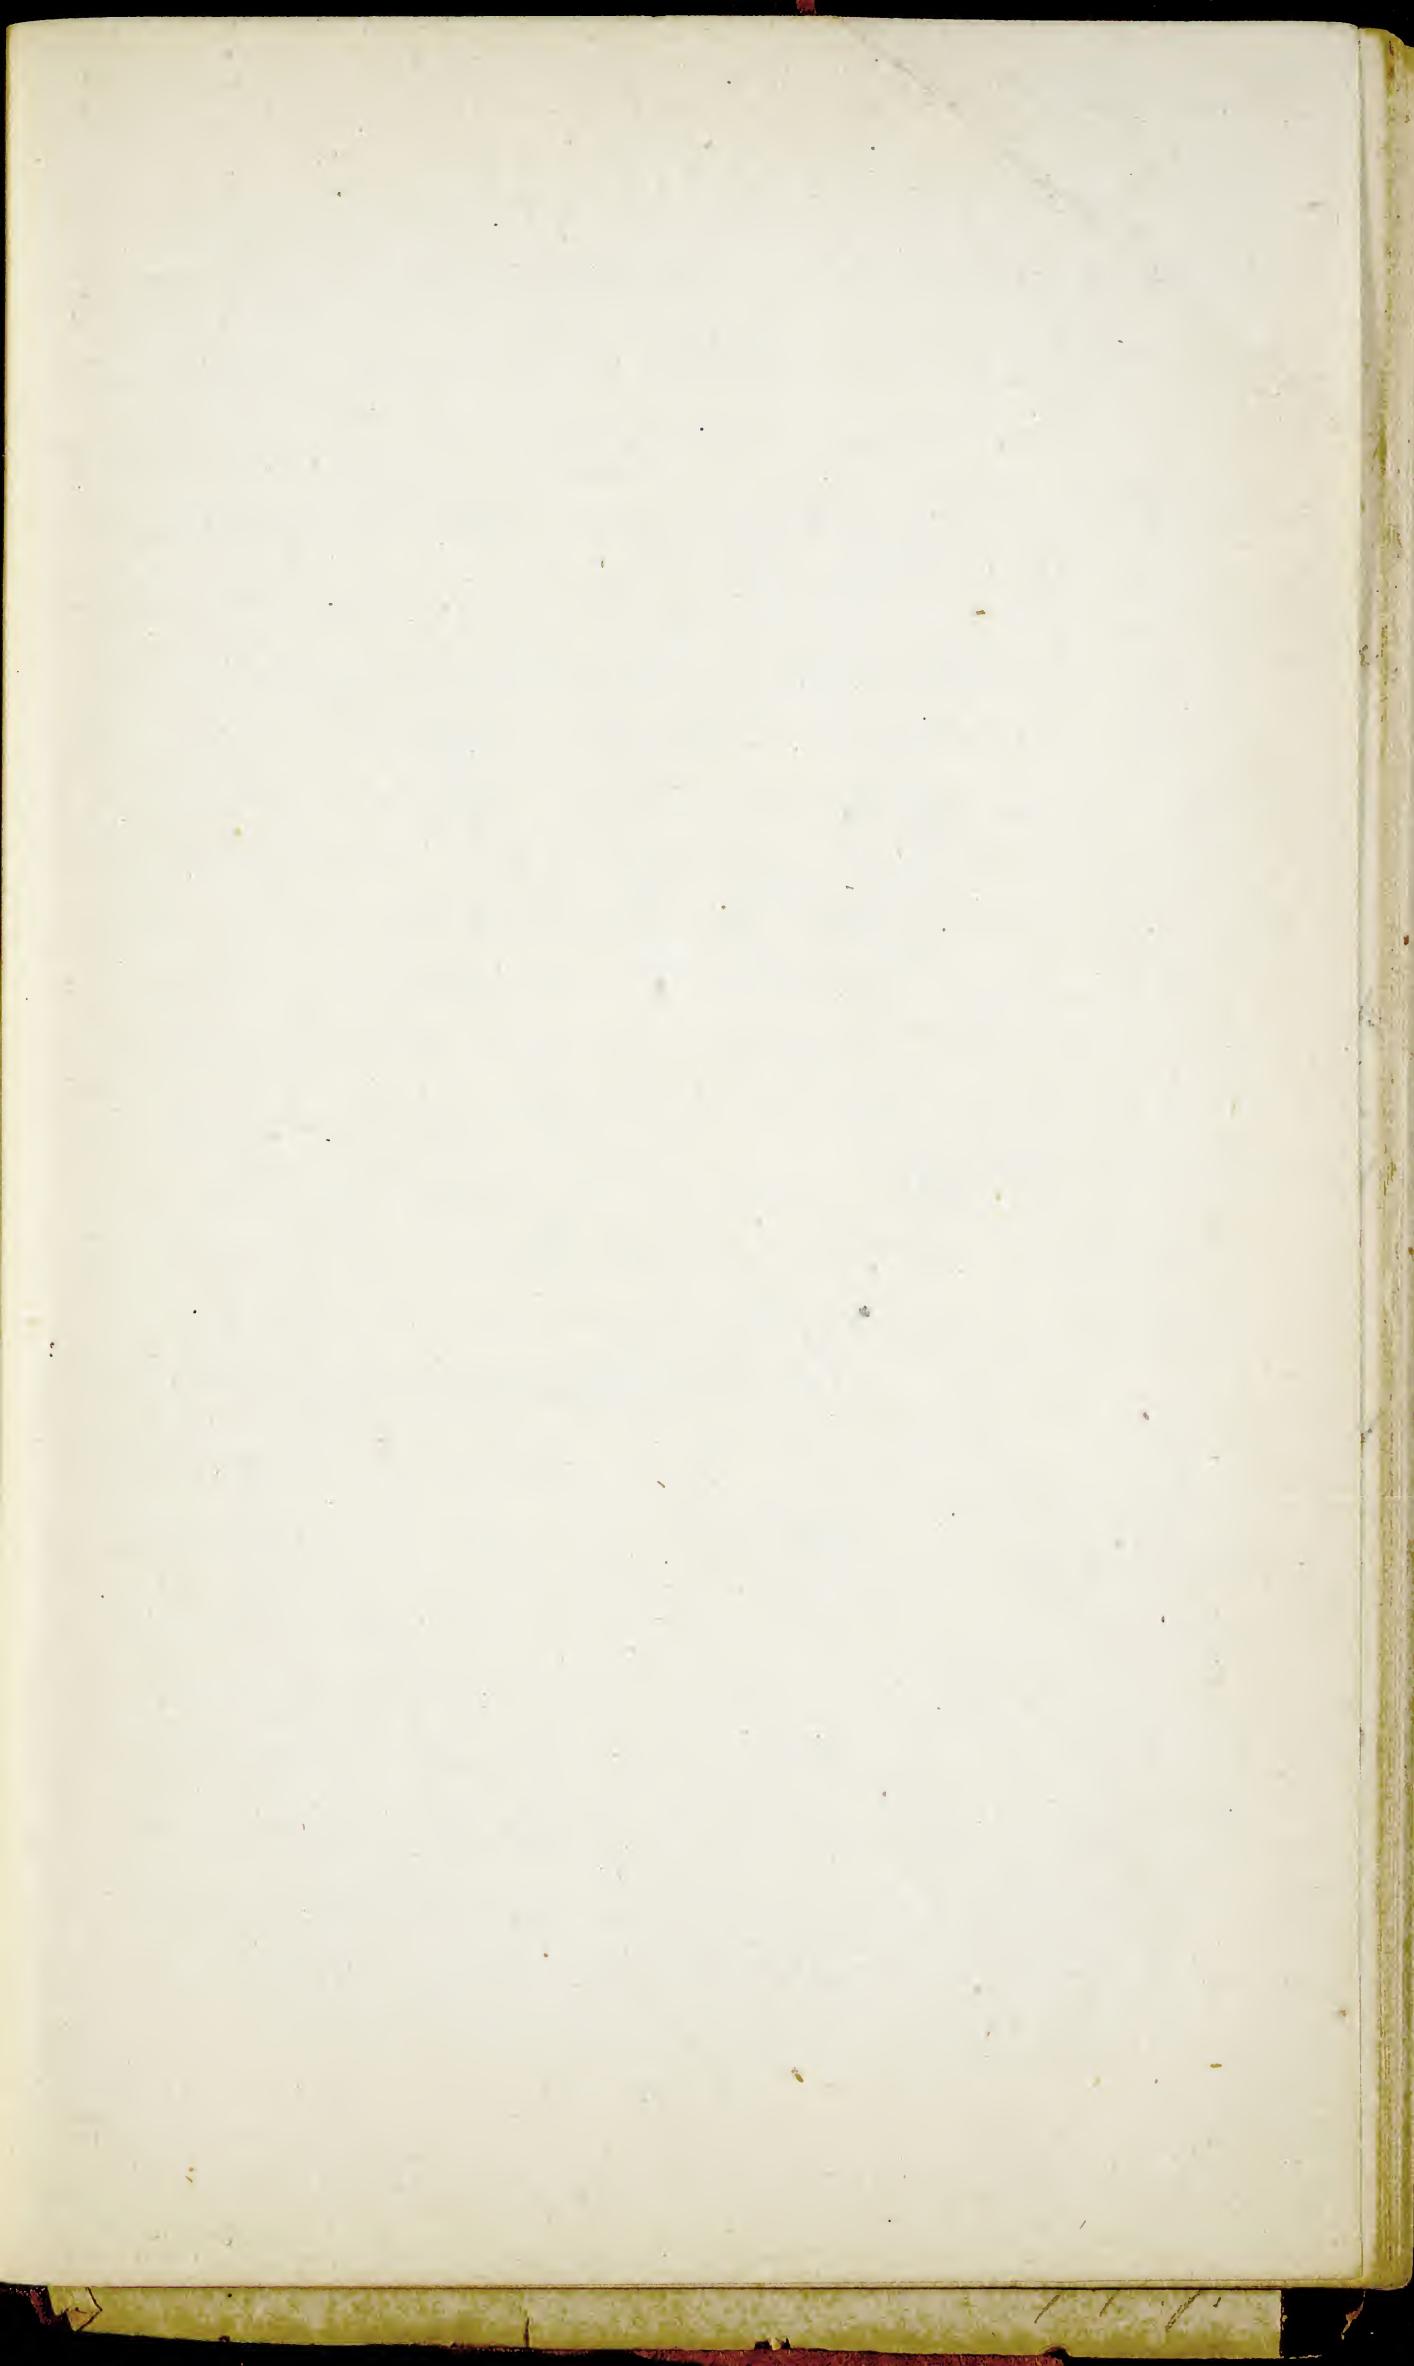

Gangrenous chancre; the crusty blisters  
are raised by follicles a mass of which  
the chancre partly soft partly hard  
After a gangrene you see no ulceration  
follicles - soft ch. - a pat. wh a soft  
chancre was cracked & bailed & after  
he was well found a flat cut syphilis &  
seen the cicat. indurated at the base  
the perfectly soft in the center - a  
Ch. chancre

## Polyuria

Men 60 years looking like thin skin  
and brown in face other normal colored  
many wrinkles in the face slight itches  
the vesicles, apertures increased & pain  
increased. Skin also atrophied thin hair  
that shrivelled wrinkled & thin the skin  
in wrinkles. At you need for many days  
when the skin goes off in reddish brown  
as on the head, a pity a few for  
Proceeding. One month. Spider apple  
will induce itkin. Best to use big

Polyuria some bold red oil will  
E. Gunnison hot so. Prod. under  
light red colour & it is with scabbs

small & slight & though rather  
detached come again. A diffuse  
inflammation is prevalent, or Knoblauch  
Dewerally over the whole skin & particularly  
the whole under it appears a weak &  
affable. In the Kenya flock few  
are sick now with except a sudden  
all ready sudden &c. can say nothing  
in this, as far as I have seen. The last  
get strange, some with breaking  
of the skin now, & bath got the  
treated, another with loss of  
fat. This case is indeed exception  
but treated long & have all the con-  
tingencies. The first case  
in 15 yrs. German has seen

Harpes tenuisans L. marginatum

Patch small size on the upper part of left thigh in the center ischeph & blancher from there above & in the middle the skin is dry. Blanched in groups are called Repes when heat is sent to a village, people & cattle H. tenuisans comes in the center but not scurffer. It is an edge marginatum it does not develop as in another place. Not yet an 2 margin till the offer has passed the limit of the outside of the scutum. You are I same come what can all P. tenuisans, the like Cooke or if of the clamps & land in the scutoid - the only element from & off when the clothes pull out get H. tenuis. Comes not off in hairy parts & smooth. If left over pale and surface in center dry & spot in each the mounds. Or come as blanched or Repes tenuis, vermicular. They last 2 & hours. Dry & hair as pointed. & H. tenuisquam. Similar as Repes tenuis quadrata & they come also in circles in the hairy parts & a few others not blanched or scurffer. Rain when they grow break short. It comes seldom in head out of breed & the face comes out. The tail vermicular. The maculosa form has a great resemblance to a macula squamulosa. Only when seen in H. tenuis - come in center skin & also from in center white spots and epithelial in the skin & may be pigmented if any scales dry on a very nimble even

*Therabiae*. or the Poly. in the grub. for  
A off will sap. in d. in a Carbol salve  
sp. Sappalkal. in a flannel. & we are  
very simple. Of widely extended for  
a bath & one the Carp in. & our very  
revolution in a ca 3 t.

On the granular or uneven surface of thighs  
&c my comes out in the sp. of the skin  
dark & certainly nervous. After a three  
months healing & first free return in  
4 hours. Came in in Poly nature in the  
other orange in it when they get in the  
hair bulb. & when the gender even in  
few numbers remain suffice for a complete  
removal. She also factors within me  
comes. There being no further an oyle  
cells from the tubules.

*Herpes zoster varicella*

Very Antiseptics. This patient presented  
the appear of me suffering with a macul-  
o bluish inf in some spots under less  
maculosa than others were in the center  
covered with scales. It was very diff diffused  
all over the trunk! We are very for  
six or ten days & then put take a bath off  
in. O. Busch

## Telomias

In palm also yellow hair & reddish. Also  
out this amphage of spider. & Telomias  
then the poison arises and in this  
spiders. Trottable a Pers. says. but in  
the pepper, always the gyro find. as  
the fruits in the latter are attacked  
Painful at his work. Hard shrub to  
be worn of cayenne. Food also in  
E. Ghans. who I. often often  
with them.

## Ceyamus papulorum + myrtalaria

The former fruit all over the body, & one  
a spot sharply bounded on the thigh  
old and old. It is men of a local  
disease here seen, out more with  
fructose. Smaller, but no pain  
than 4 days wear of further with  
Rat. cases. & easy to propagate in  
Collodium, all soft, as 3h. Ceson  
rubin 3:1. wine, softly scald  
no pain. & the spider is saved in  
shades. The feeling of burning is  
much preferable to the attack to  
the skin. The poison is caused by  
the Rat's cayenne. Lapis rotundus  
not good for the E. wind. but Rat's  
also good.

## Urticaria

Third time. It continues 8 days & covers 3 days. All over the body except the thigh when then over Pompei, the down is always more than the depth. differs above w/  
the periphery, 2nd major even at the  
base of the glands. Brandy & sponge  
the body over & apply camphor.

Eczema cutaneum middle aged man. Extended  
over the forehead, ears, cheeks &  
behind the ear & covered gland under  
ment. Was drayk for 2 days. <sup>in comb.</sup>  
Separate some of the scabifer & see  
what is beneath, & find the skin very  
moist. Wash externally for the re-  
maind of the month, use with a sponge  
& put flannel on for the night  
After this we ran as fast as I now  
another case & above all, more particular  
character. Was drayk for 2 days in Ullin  
Perac's. Of Jean Ricetti for head & for  
some days, & afterwards as much as  
possible, we chose to wash alcohol while  
in the former case infiltrant till present  
are the runs too.

## Eczema vesicante

Child 4 years old, said with Brings  
combined?. All over the body. No drug  
or else in 2 soft & elastic no elevation  
no blisters. We use drayk in  
towels & apply flannel on it.

Argenical peste. 5-ann. 15° by water. 125°

but the only part of the body that it will not  
be a discharge in it is that it does not affect  
the sound part when laid a pleasure  
it leaves a good flat scar behind it.

Cowpox garments most useful for all  
but chronic incurable. Skin affected  
as. Ichthy. Pow. wear them in the night  
and wash in the morning. & then put on  
ordinary cloths. in the day time.

Fans, & other Paroxysms affect, one the pur-  
eactive acid, weaker is not much good.

Eczema capitis. local, confined to front part  
must distinguish from Seborrhœa

when the whole head generally -  
and of local a local cause - as -  
me, Ped. cap. & found the dog in hunch  
head & neck. In front it may usually  
does follow a Seborrhœa as with care  
Health stay ch. as a. often a fever this  
will be attacked by Tegmina, hit well  
that breaking any L. cap. over cause strength  
of head. wet & ch. moist shave a week. such  
a one must be treated differently, you must  
as with. Camomyl & Saffron. Let down  
not as long as possible. take 2 or 3 mouthfuls  
for the nose & not with salve or plaster  
but with seife. Then take Lebuthine in a  
spray 2 or 34 times for 2 days. When apply  
the salve. ox grec; Ph. carb. as 3 jps.

Tepoma 3 jps. o. olive oil. gr. satis. trouble a lot

us. when get by crusts not apply. Turn  
in these kids to contain the salve or fat

Impetigo in adults always a result  
in vigorous influence on the skin  
after scabies, Pediculus, cold, compound  
initial salves, damp dwellings all  
encountered in adults. Also in <sup>against</sup> various veno-  
les. One species of impetigo, from the  
land in which to write organs super-  
the kids. In course of time from both a  
in bright. Some points out that  
stabs & vesicles form & also come with  
it Impetigo, broad bladd & pointed  
form. It may form a deep ulceration when  
last long.

### Hab.

Flor sulphuris 3*lb*. long sulph 3*lb*. Bat  
pearl 3*lb*. for each. 3 months old  
4 lbs altogether. Let them bathe with it  
is healed. The baths are. Very suitable  
+ any. of an old child 3-4 years the  
d. Russi flor sulph to 3*lb*. Coal albu-  
min. resinous very simple to 3*lb* of oil  
extended. Here are the modes  
flor sulph, oil Taji, to a 3*lb*. coal albu-  
min 3*lb* Sals. min. to a libra. Burn enough  
for 10 persons. Then a young man  
use the salve for 8 days + then take  
a bath.

Find here. Her sulph at 3 ft. Collo  
Sap white. Big molasses at 3 ft. and  
North Penn 3 ft. are a flavor same  
as after the was apply any time. Krebs  
at Styrax big. Her sulph at 3 ft. Collo  
Sap white at 3 ft. Hard, are often  
run with soap salt with KCO<sub>3</sub>  
or with ~~the wax~~ other about an hour  
with fine fire reaches. When the bath  
is out in the colub over the sand grains  
are not well.

Powder, by. chiefly in legs. Plan flat  
scale not much. Tend on a bath. salt  
with lime or seafreight & salt with 3 or  
4 m - 4 m well will have dried powdered  
Pedicilli Rubis. They spread very far even  
& beyond. Are very tiny.

Dust, Syphilis, affects about the face as  
in the union when the ulcerous are  
not charable of any they give a white  
powder like of 10-24 gr + 3

### Palmar Psoriasis

Often comes 20 years after the palpable  
diff disorders sometimes for 2 days  
& daily look at the surroundings & at the  
mouth, almost always find signs of the  
then. Are turb. 10, 12 in lower. Do need  
a prompt treatment.

Acne Rosacea. Standard practice does not cover  
this, as in a lot of patients too much goes  
too little - a Periodic, if strong in a  
seborrhæa. Inflammation of the gland is due  
of both tarsal glands & hair follicle of both  
When most of the pustules naturally they are  
more inflamed & one vera.

A Pat may get from a mech. doctor how  
can steady it mounted. Burn is pearl.  
into a stronger deposit of sebum the hair  
enlarged even like trichium sebum  
& my attack very noisy of the sub-gland  
Finally of burn contained three glands  
inflamed & purulate. Other medicare  
act for outbreaks. Tar, petroleum

By A. ros. can be removed. It will return  
The affl. can be on the skin, scarific or  
rubby with some or the tops alcohol & ap-  
p. with Lac. but fl. scratch is removed with  
begun by this in 1 & 4 weeks. See in the  
case when soon come part that has  
at bullock. In them must & cover the  
vessels with them i.e. apply alum in the  
& whiten the vessels. about 1/2 of the  
aff. subl. & go to 3 & an an emporium  
then much infl. scarff. with a solution  
of vessels & give Drap. H<sub>2</sub>O dry of many pust-  
ules with tiny Drap. When new found  
break away with scorch & knife. In each  
case when such is excreted. which infi-  
trates larger & an acute with some

scarf & get an acute, inflamed  
bellyache, glaucoma. Bulbous return &  
then ligated. To come in 14 days (see 15 pg. 10k)  
Pronaia, hereditary often but does  
not come before the 4 year old.  
inf, seen 2 come before that time.  
They are never born with it.  
This come over man in the family  
very bad it as a child never be-  
hind it 18 months.

- commencing Impetigo. long standing  
often comes in this way in weak, abn  
individuals.

warts

26/2/7

The hand sitting warts on the face being  
more with cold, and when of  
pigmented. I put 1 alcohol pencil  
with it, a platter with a pencil  
which eat off the warts.

Syphilitide. (polymorphous) Maria  
numerous livid red spots on front half &  
over surface of tongue, single & confluent  
it's a marbled skin on a syphilitic S  
some weak person get when cold this by  
biting forefingers red in purple & white in  
color & will remain pigmented if from  
other species H. been about no  
scratches or cuts no humor, nothing  
on forearm small & hardly with

Scales covered w<sup>th</sup> profuse squamous  
sp., besides these some larger - with  
scales on them a Psoriasis <sup>sp.</sup> & is  
the infection very marked beneath the  
blowdry when scratched Other spots  
occurred & show a crusty layer  
& show a sharp border when  
at other spots a thicker plain  
abraded surface when button-like touch  
the begin of plaque is smooth

Hand, fingers, esp. on middle but  
not over the knuckle but in the skin  
a crust with scales. Forehead  
pale red & scurfy.

The skin of a macaque like in texture  
esp. in upper part. Next day  
blistered when upon pressure  
burst off broader & often where  
pink have dried to scale. B. by first  
then circumscribed & a ulcer have  
Penis also with scurfy crust & a Phim  
present. Has had the ch<sup>a</sup> before November  
esp. but often 6 weeks ago. probably  
read & for them spread. Head, hands,  
elbow & knee, pull out sometimes  
these flat ulcerating spot on back arm  
in conjunctiva esp. but ch. but which were  
thus form of many such small ulcers  
but the recurrent form also often

Sycosis of comatose skin. good infl  
tuation so recent inflammation about a  
dark cloth. Hg. S. & Silver 1/2 & one for  
about 16 days. shave daily & wash  
after the application of the sulphur.  
Sandalwood soap can also in these  
cases of old skin be used. after wash  
use. Sulphur, Nat carb. Fly & Red  
Pew. to a 3 p. ought in 2 or 3 by the  
first four h.

Sod glycerine in nodes into the skin  
and sometimes wonderfully quickly  
even after a month care I have been with  
internal eggs for this for months

Farms treatment. Must remove the crust  
with oil of maceration & then the hair must  
be shaved so that no dead skin remains  
and then with the Saponin alk. in which  
3 p. Carbolic acid 3 t. & wash twice a day  
or a Sublim 3 ~~xx~~  
cutting scab is good. chief thing is to keep the  
head clean & pull out the hair

Purpura. Head & dentition & also  
the mouth a diffuse redness on the legs  
legs patches of Draining skin which  
do not disappear in pressure & in the  
center a papule. whole symptoms  
several from from Cryptomeria Iris.

Pisces. monocle. Ob.

Feb 28<sup>th</sup>

Syphilis. Hebra hold that the disease  
enters Primary & Secondary symptoms suffi-  
ciently to sometimes get the first appearance  
in the inner organs as for instance the  
Liver producing a Jaundice of which he has  
seen several instances, or in the Kidney  
producing an albuminuria. This only  
because we see the macul & papul. symptoms  
on the skin that we call them the first  
symptoms after disease. Present Kraus  
affection or Mania may come on with a  
papular syphilis. Interacting case of a Radium  
clown who went out of his mind & in four  
months under Kali pod recovered. Care of the  
bat manufacture with Doping had his a  
syphilitic four years previously treated. Gode  
who did not know of this, Hebra was strong ad-  
vised Kali under which he is said never will  
stand swelling. He does not believe we have  
any means which will reduce them, notwithstanding  
when external oil Col. Lin. oil, oil, often  
seen after Measles or small pox, occasionally  
after Typhoid, & most plentifully after Lepra  
and will remain for years

Impetigo contag. He does not know whether con-  
tagious is such a disease as whether it is really conta-  
gious the members of a family exposed  
to the same condition all get the disease  
the disease & its contagion not passed

not probably a Pity disease.

Fairly common abulata gift before you with  
Leprosy (14)

drapetigo need all over the body  
& pustulation over the trunk, face, neck etc  
a second thing is the white spots. Pigment-  
ation & the surrounding skin in pigment  
less in the white spots black however. But at  
all scattered occur on neck face lower  
part of belly & pubis. In animals also the  
hair is also white - is it very strong but  
when all are equal give the diff. complexion.

Symptoms varying from purple, on wings  
in color or in the right ankle & back  
of foot. Human 53 year.

Legion. mostly. By 17 y. and even older  
in most of legs also 2. month in face.  
Lebrellian part on it & then has treated

Ignea skin & head. Many visits. Never  
applied anything in it. Is it a Bissans  
distinguished by the portion of the short stocks  
& ribs of body. (b) The scattering of the hair on  
the head in some places with a brush

(c) The margin. not regular but like a  
(d) when treatment see if a cap is not in

upper off above with some striches

Cash. on 35. 301. of Lebrell. one for

8 days & after that you may  
Acne Rosa  
Schmid and Seifert - Supt. up in the red sepi-  
sand. etc. Put. Laps. along there. sepias  
are to put to trees. food, etc.  
Acne ros. usually gets worse with this  
treatment in the first few days but  
soon better.

Lichen urticatus. 9th year  
different effects. Now  
wh. pass over the skin pale red. & bluish  
then others arranged to meander  
others live dead like as they come out before  
it comes out of childhood, not getting  
any thing pink up to so, & should be  
typical, agrees with Purp. by them -  
etc. also forster. Now a regular case  
on 14 day & Oct. in fact a last 3-4 m.  
Must be careful not to confuse with  
a pale brown & bluish like when  
a slight pigment is left in a chronic  
case & just out in each & hand but  
in face it changes often in short time  
a like the Purp. like Provo, cannot  
distinguish. As it does not have a like  
such a case, etc. Lichen in ripples. Provo  
go many. French. Found sepias with  
their powder with starch  
of course some areinkle by day

Ser. fulvus, child. with a subbrown year  
fie & balt. - "He eat like this in  
12 days." Then Carb Soda 1 lb. in 12 dm.  
before, put the in warm water & dry, & the  
+ part of the Soda in 2 min & then roll  
with the balt. acts wonderfully well  
again. Also against Lupus, a good  
red clay he has in a jar & a week  
later will he eat 3 or 3 1/2 lbs. as much  
as paint of the pfe. in circles also better  
than good 26 morally. Even against Leprosy  
it will give even 2 1/2 lbs in a few months his  
on the hands for a long time they will  
even pull apart, from stiff from a lack  
of redness or

Lichen nitrocellos. By 16 years on hand  
no symptoms about them, in other places  
they soon get chronic. Often on first  
hand the base a little haemorrh. - a  
purple powder, or the skin livid  
Lupus.

On the periphery of regular clean surface will  
begin stiff & by after the original ulcerous  
is cut off

## Spiral by Intervolles

5/3/10

Can never say in this what method will prove efficient and successful as a man 43 yrs old in right shoulder & shoulder on right arm. front tooth had for over 2 years was also on left cheek but this person was cured of a salivary stone in right ear disappeared spontaneously a little taking some do very much buried supercavum & lump. It's origin

## Sophularia longii

syphilitic ulcerates  
syph. with single ulcer, ~~blue~~<sup>purple</sup>, do-  
ing gradually & has much pain. Bas-  
in epithel. may however, in syph <sup>or sharp border</sup>  
depth of epithel band. Syph. may re-  
turn & out of mouth comes diagnosis  
rule R. in 3 months = healthy. If Can  
it's no influence H. is so there can  
a specific reaction or effect before  
4-5 weeks. Also on tongue base then  
Tumor come + sig after the time goes  
can he infected or not? Leonton may  
in a cavity, apid rubbed off & per. a  
blood vessel up a info it into a follicle  
+ infect. or the an come, is swollen.  
Oh sec, Is salivary infected, then exper-  
no changes. still possibl a cellular  
stement, also in a case can be mixed  
without any abs of small bulb  
midf. from Anna, a m. syph & R. such  
will never be infected by a strong disease  
inf. it's such a st. weeks, it will be  
infected. either in the mouth a only  
is the H. infected, or Anna no other  
aff. but the the milk only a syph.  
ch will never inf. L. so the last will  
a wall, Anna. The wall a L.  
Spina. syph of Par bone one from Job  
+ more plentiful, I went + megua  
as per. none found. To ready  
blood, sal., skin & small all  
will infect.

What is this a nice old dog by the way  
very steady & good what is the next  
order a set of broad bands which  
can't be got a band ch. what will  
these also by this means fit also a  
chance that the ch. always up & down  
is untrue all the recent form are  
nothing who after long time come on  
in the ch. not whether again prob-  
ably still in the ch. & in apt to  
be profusion. It is partly not  
seen in the ch. Infusing not  
succeed to infect with a <sup>ch</sup> woman - a  
healthy bird (one a few cases in fawn)  
exceptional does can we expect  
there, deer in Egypt? Once been it  
all over so say Reed who says I  
was unheatable disease. Must say  
that the seen healthy is not except the  
chips are as a rule but the longer  
<sup>the</sup> bird ~~infected~~ the <sup>old</sup> infected the longer  
period healing & the exception but the  
chips become less plentiful. Can  
one a second time be infected & have  
believe, but now a case where  
as he said have had & taste form  
& yet in a fresh chance disease  
Reed says when one as made ch. put  
power for a ch another to come

can be granted for a hard elongated  
softens me, & for this's reason I first get  
several others

before tomorrow <sup>will be bad by</sup> ~~you~~ (I am led in hearing)  
young men all over the town & not  
so much on legs, & a little after  
a few minutes recitation, as well  
as palpation, some of which are traced  
with a color in center. The greatest  
vessels to H. town & so a popular  
place, distinguish the two seats  
in center of some of the efflorescences.  
Has also an aphlagen of epithelium  
mouth & in cheeks. No behavior that  
he has by 2 or 3 years ago, but that this  
is the first time. A hand diagnosis  
he found cure would not beat them  
yet till see what it would turn out  
Am very. Great trouble  
Prutius. (H.L.)

Woman with child, 3 months  
pregnancy, gonorrhea, no distinct gang  
ring round on legs & arms, without  
itching. A. Prutius: dependent on  
the pregnancy. Child by trades taken  
also

Lipos dermatoide. Lips also in & fore  
dentures & while pinching them other  
ing to them, can be a nervous disease  
& H. food can worsen & some go  
grave, going. No care if they are round  
lips (A), shaved plates of I on the body  
head. Cigman first described under  
this name. It. described at present  
as ulcerous or a vesicular. His first case  
was acute & healed under simple  
salves. Lips & nose & etc - it is an  
ordinary, laboratory & often said the  
cure which became more general  
found & died. Now we can say it  
is a local affection & may even  
even a fatal come. affect the body  
well. Some are troub. situated  
in them severe. In the face above all  
so diff & diverse, but may be with to affect  
the body & general well as can  
but it may also affect the  
same victim. L. not wet & not blister  
recurrent, no it being no pus. An  
irritating vesicant action has been noted.  
Proven also may be confirmed as  
excavation <sup>in</sup> skin, as in L. vulgaris but less  
no pus. Then the cure is different for  
Prov. when scratch rubbed like finger  
so flat can all be very pale & thin too  
on the body, as I can often see small  
puncts & vesicles not unlike Prov.

It will not be seen outside of the cities or  
it not found of Sweden but Israel & Lebanon.  
The people spend a while building it  
in marble & in single cases.

They will not mount one man against it  
also a L. has attacked a column good  
to people stand, all not mean  
fallen, <sup>calm</sup> because he power some are  
so, terrible that cannot even bear  
a simple being lighter how heavy was  
the scupper, & think it the best.

Devotion fitting no good - use at some  
distance, a twelve days. It uses I  
for 100 days continuing.

#### Infectio Contagiosa

Man with thick sun-dried pustule on  
the cheeks skin yellow colored by  
a single & stand on the hairy parts  
has a single pustule dead - an impetum  
with a lot of small yellow color as L. warts  
does contagious. On some burns  
and some sort of pustules on face &  
moderately at all in any individual can occur  
these his case not proved. Only nine  
had it 14 days ; Sublime no  
t 140 pustules & compositus  
student allowed himself the way  
with the matter for this case

Lichen infest. (see few pages back) qud. 19<sup>th</sup>  
may come in less a month & like a specific  
papule. & a yellow exudate on it.  
You can see somewhat near. looks from off  
a tree of Lichen & Nat. tree. how much  
more by human tree. & it is no pain off hand  
as well when Lichen infests very comes  
comes you acute. inf. except it has  
also been cover & covered them this  
& will do, called at once & may  
go over the whole skin blue red streak  
& mixed with lymphadenu & even  
may run on to a Pyrexia. No ha a  
case who run you had this general  
bl. tree over the body.

Pogonias of under head next always  
brought on by lice both in children  
& women. Hair matted together  
Put in salve. or Petroleum  
& days & then a bath.

Papula rubra head, children & young  
old women head. Back or large  
parts in cover. not of ten. smaller  
will exist & be covered also  
extended over the chest & a little infected  
over the body a L. papulorum as usual  
in scrofulous individual. Considered 37.0.  
the last 36.2. a day on head & in body  
over the rest also.

Dreams about syphilis. Don't know  
Phenox Tumors. scrotal. Do not know  
the material aspect of them, but in lab.  
slugs part come to  
Mouth, on lip, around, plaque, but  
plentiful a week, an inc. epith. cells  
on mouth angles, such as are involved  
quite spontaneously often with great rapidity.  
Not in any case other than a cutaneous or mucous  
Others indurate & ulcerate & a white  
spot. Last wh. remains, you can see  
any relapse, all infection. Some think  
that these white patches left not the mind  
of syph. but true it is one of the last app  
of syph. may be there after year of suff or  
other app. affection of "blister" wh. must  
a white pink spot discharge. He also an  
& so on to even so not care. When he had  
cold app. in practice <sup>for</sup> can you look  
the single app. of an old syphilitic in him  
complaints of irritation when takes a big spec  
found, & see a white shrill in cheek &  
tongue of all the parts. Perhaps know nothing  
of this made <sup>(3)</sup> in two times intervals of spot  
somewhat deeper than surrounding &  
when expand see the papill. but from  
then on the skin off the sharp, somewhat  
on the periphery with a small border  
excavated with hair, a little ulcer  
all this may be called Pronafruncans.

& they come under with the P. of hand sport  
& they are an accumulation of epithl. a. the Rev  
Horn & they are nice now are a tiny large  
& troublesome, for you or many not have  
other means of empf. & nothing in  
M. or L. but in life. & after hand &  
grows in sum of warmth, as also may  
towards inward, then white hand  
guttating appear white lips or border  
of tongue & mouth unchanged for  
years undisturbed. & we are here at one  
a certainty. They are rare & among Palms  
person. They are generally held for  
Epithl. & from them Epithl. my self  
come as Epithl. my cure for Epithl.  
as I have had such cases when for first  
had treated palmolysate. A Cup for  
20 or more years with a close cover &  
undelay, to a full grown, a week  
after to an Epithl. so much valuable & an very  
distinctive & get gone I think

From 1840 to 1865 H. observed a case of Epithl.  
at this time mid day, a Epithl. hole out shufly  
apart coming out Hospital school of it

from a common coin to a bullet has Lebret  
J. Brown has traced all intermed steps.  
says they form the exterior window in the  
bullet hole growth. Must be careful as  
my take these galls when small from  
Epithl. when they are in reality Sphl.  
& be a case little this when I was porphyry  
& sheath & the case was in 5 weeks with 10.

To all that know us, & it internally  
as now, & again the past & aquates' voluntary  
here for there, tingue affection.

Very some also on Volum seen Rehkopf  
~~again~~. Dr. Mr. of M. H. & Khar, say he not  
by the late inappetit, also the very  
post, he has seen dit a. the very first  
symptoms of a few, syphilitis. I am well  
affit in m. fine, come in with a chiller  
meeling & then the fine sweating, I must  
say that it is syphilitis. Now him see, full  
or an intent to cure. May come in small  
children & then a case in a man, <sup>a friend</sup>,  
man &c. all health, get by, is a widow  
named & other who all syphilitis & wife infi  
a year after marriage, & his. wife, got  
taken a brain affit. & lie on a sofa &  
then die. widow he said been took off,  
when a widow & had his syphilitis  
He & child to be but often off as an fit  
then then case coming in all were a. Rely  
a fit of all treatment go on to distinct  
diffin place yet al. and is fairlier, health  
to cure Play. Am. in cold farms with  
bad habitation to earn there, without  
the best treatment wh. is in many cases  
quite impossible. When you can eat with  
Alms, & give the R. L.

(Kings' Ring) by me at Gloucester.

I am sure I had, or a rabbit's right  
in such a fell mood, in the course of my  
hundred of hours' practice over a period of  
a year, offshoots - some from the back,  
others among the snout, but also from  
an otherwise undiseased area.)

From behind from lymphatics back of  
the head, covered with crust which  
is removed shows an ulcer with pale  
granulations (undermined), surrounded  
by a zone of granulation.

*Lepus hyperstrophicus* and *Nunum*  
had little projection in arm & hand  
at the periphery, especially in center, a little  
irregular like an irregular knot when  
the broken bone follows the spot, project  
above the surface of the skin & an infiltrated  
area with hand & wrist stiff or bent  
down below & in neck back & sole but  
not so much. There also especially the right  
ear & the tail follow, but they are white, while the  
occasional little there are, single spots  
& along the course of nerves, often along the  
nerves or others, these however are covering  
in groups & where the broken bone follows  
see the infiltration. Such appears along a  
cervical nerve would be undoubtedly cur-  
tely seen. A syphilis some would say.  
A *canis* by *cognita*. Then we often  
in removal of crusty epithelium  
it is found that it is dried on 2-3 days

in hand & get a thick black plaque from  
small growths on surface with a  
Brother covered & then developed and  
running for 2 or 3 years so soon as not  
• change the form of the affection  
The 9 year man used in Japan. but this  
affection is characteristic. & as he has  
had it long a few years. It is doubtful  
it may be a syphilitic congenita  
No affection in the mouth  
must treat as a local disease & whilst Syph.  
& leprosy. fit the same. Must remove  
the water & small growths at will not  
do. I advised on flannel & use this seven  
days. when removed such spot eat  
with caution. Also Cor. Ark. Alumum  
Sp. van Giesh. A certain <sup>Camphor</sup> part equal  
= Bleusson solution

Sycosis: upper lip much infiltration sharply  
bound'd, next remove the mouthache  
may lay siccative in eye, 2-3 days, to see whether  
an inflammation in it, or keep the <sup>Band, Drawn to</sup> eye, out, gen-  
eral. If then do not remove the inflat. and  
the cavity. Take Wormy in Carbolic acid, but  
takes a long time, even 6 months. In any case  
the application must be applied with  
burn & bound, lightly at night.

Lupus vulgaris, treatment! internal  
same go on about taller long again in

Cards acid cut in strength of 1:60. 80:100  
has any effect on the lower organisms (Bell.  
Plz cells in 1:1000 will not grow but are not  
destroyed, but take them out & place in  
favorable conditions and they grow again  
in all cases and oil on them has no  
Lupus vulgaris

Woman 40 years old, husband Tom Syph.  
has suffered all over the nose & cheeks, skin  
bluish red, projects a little above nose &  
left cheek, on the bluish place beneath eyelid  
& follicle is purplish, shiny, beats also  
numerous, & on right cheek. Infilt much  
slim mucopurulent, can be felt the moment  
dry <sup>the</sup> hair acne rosacea L. vulgaris erythematous  
for a ros the red heat & the redness of  
the vein & nose & veins, & the sweat  
high, also the infilt also may press it  
against it. When cold & sun, find in  
sunburn many brown & blackish blisters  
& etc., after a ros, also find a few acne papule,  
or of all gone get red & raw & raw, or more  
it is a ros, the infilt would only be an accident  
complic of it as in influenza however, of course  
the atrophy, a driller & nasal discharge  
are also a factor this retained.

Lupus, <sup>herb</sup> there also a buttell appr. we also in  
England infilt in this disease, but  
they found in the open of full red spots  
in dress & covering for their patients, or if not  
covered up with soap or oily ointment  
might it be Syphilis? occasions long lasting  
in valley on the nose may be this is its sign  
but on the people the signs of papules and

and as a rule must study the peripheral in all  
these cases. Infil also more diff than in typhoid. Proclines  
to *L. vulgaris*. This diff as it is a var from  
Scarves here from the deeper strata of the tissue  
& may sometimes even be so internal as to affect  
the skin. It also grows in these cases & above the  
wounds & produce a decided swelling or  
*L. tumidus* (not so in other var) Common in  
fuddled day, debilitated people. In these  
cases (as in this) often accompanied by Ulcers  
in the mouth & palate.

Treatment: its very deep & chronic & difficult  
inflammation. So now with attempted, can-  
not abbragia. In these more difficult, good  
work, scabbed & often *L. prodigiosum*  
is sown with cutt-pinch & the wire  
mesh <sup>after this</sup> is this, attempted will answer  
part of the one cheek & then in small raffles  
, covered with Copper lining.

*Lupus vulgaris* upper lip right side & right  
cheek covered with broken and much  
& half raw skin at angle of mouth across the palate  
about size of a lime bean it is covered  
with crusts. Boy age 15. Very bad 2 years.  
Take 3 months & can do nothing & never R.

Never an instance where a patient  
who had been treated in the N have for-  
& much, came again in 5 months with  
a second attack of the same & during  
this time was vaccinated & took well.

When purules mixed with blood, according to  
the case may be favourable cause.  
If the hair, purulent, on the body, or from  
come out, or as Brule write it. Is the pus  
itself hairy, or is the scum dry.

Blood & water from a Purpura will  
not a sweat well even in less  
than 2 days

Czerny papules will tolerate it being  
out a little. but the tubo was so profuse! the emp
